

MODULE SPECIFICATION

| Part 1: Information | | | |
|---------------------------|------------------------------------------|--------------------|--------------------------------------------|
| Module Title | Program Design and Implementation | | |
| Module Code | UFCEXX-30-0 | Level | Level 3 |
| For implementation from | 2019-20 | | |
| UWE Credit Rating | 30 | ECTS Credit Rating | 15 |
| Faculty | Faculty of Environment & Technology | Field | Computer Science and Creative Technologies |
| Department | FET Dept of Computer Sci & Creative Tech | | |
| Module type: | Standard | | |
| Pre-requisites | None | | |
| Excluded Combinations | None | | |
| Co- requisites | None | | |
| Module Entry requirements | None | | |

| Part 2: Description |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>Educational Aims: See Learning Outcomes</p> <p>Outline Syllabus: Basic programming concepts:</p> <p>Sequence, selection and iteration constructs; Simple data types, structured data types: arrays and structs; Access scope of local and global variables; The use of functions with parameters; modularisation: coupling and cohesion and structure charts; Arithmetic and logical operations; Handling strings; Use of pointers to access arrays and structs</p> <p>Data i/o using keyboard, screen and web; Simple file handling; Operations: searching and sorting</p> <p>Familiarisation with IDE (integrated Development Environment) and command line operation; Testing; Proof of testing</p> <p>Polyas approach to problem solving; Algorithmic and strategy problems such as river crossing and NIM</p> <p>Software design and development:</p> |

STUDENT AND ACADEMIC SERVICES

Requirements analysis, functional and non-functional requirements
 Design and development techniques; Top-down vs bottom-up; Functional decomposition;
 Iterative design, prototyping
 Implementation; Testing, verification and validation

Teaching and Learning Methods: This module will use lectures to introduce new concepts and direct the students to texts and web sources, while associated practical laboratory sessions will expose and explore the material in greater depth. Students will be expected to carry out independent study in parallel with the timetabled periods.

The design and production of programs requires practice if it is to be mastered. This module will include the setting and solving of a series of small problems, each introducing a new idea or technique to be mastered. Some of these will be solved in preparation for classes that will discuss the merits or otherwise of certain approaches. There will be regular feedback on the exercises to facilitate the development of skills as the module progresses. Lectures will be used to introduce new ideas.

Scheduled learning includes lectures, seminars, tutorials, project supervision, demonstration, practical classes and workshops; fieldwork; external visits; work based learning; supervised time in studio/workshop.

Independent learning includes hours engaged with essential reading, case study preparation, assignment preparation and completion etc. These sessions constitute an average time per level as indicated in the table below. Scheduled sessions may vary slightly depending on the module choices you make.

Placement learning: may include a practice placement, other placement, year abroad.

Activity (hrs)
 Contact time (72)
 Assimilation and development of knowledge (148)
 Coursework preparation (80)
 Total study time (300)

Part 3: Assessment

The assessment will consist of:

1. A series of workshop exercises of increasing complexity aimed at developing competency and confidence in the use of a programming environment and basic programming skills.
2. An in-class test conducted early in the delivery to test conceptual understanding and provide early feedback.
3. A final written examination, testing depth of understanding and evaluative skills

| First Sit Components | Final Assessment | Element weighting | Description |
|-----------------------------|------------------|-------------------|------------------------------------|
| Portfolio - Component B | | 60 % | Portfolio of programming exercises |
| In-class test - Component A | | 16 % | In-class tests |
| Examination - Component A | ✓ | 24 % | Examination |

STUDENT AND ACADEMIC SERVICES

| Resit Components | Final Assessment | Element weighting | Description |
|----------------------------|------------------|-------------------|------------------------------|
| Set Exercise - Component B | | 60 % | Set of programming exercises |
| Examination - Component A | ✓ | 40 % | Examination |

| Part 4: Teaching and Learning Methods | | | | | | | | | | | | | | | | | |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-----------|------------------------------------------------------------------------------------------------------------------------------------|-----|------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------------------------------------------------------------------------------------------------------------------------------------------|-----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|------------------------------------------------------------------------------------------------------------|-----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|------------------------|-----|
| Learning Outcomes | <p>On successful completion of this module students will achieve the following learning outcomes:</p> <table border="1"> <thead> <tr> <th>Module Learning Outcomes</th> <th>Reference</th> </tr> </thead> <tbody> <tr> <td>Demonstrate understanding, and appropriate use, of a variety of notations for the specification of processing rules and algorithms</td> <td>MO1</td> </tr> <tr> <td>Discuss the relative merits of different programming languages and their use in the development of software for different applications and platforms</td> <td>MO2</td> </tr> <tr> <td>Demonstrate understanding of the functional role of common software development tools and the use of libraries in the development of software</td> <td>MO3</td> </tr> <tr> <td>Demonstrate understanding of the structure and syntax of a high level programming language and the use of data structures and syntactic constructs in the implementation of algorithms</td> <td>MO4</td> </tr> <tr> <td>Discuss the principles of good design and apply these in the development and evaluation of program designs</td> <td>MO5</td> </tr> <tr> <td>Use appropriate methods to design, implement and test programs to achieve functional and non-functional requirements, derived from a simple requirements specification</td> <td>MO6</td> </tr> </tbody> </table> | Module Learning Outcomes | Reference | Demonstrate understanding, and appropriate use, of a variety of notations for the specification of processing rules and algorithms | MO1 | Discuss the relative merits of different programming languages and their use in the development of software for different applications and platforms | MO2 | Demonstrate understanding of the functional role of common software development tools and the use of libraries in the development of software | MO3 | Demonstrate understanding of the structure and syntax of a high level programming language and the use of data structures and syntactic constructs in the implementation of algorithms | MO4 | Discuss the principles of good design and apply these in the development and evaluation of program designs | MO5 | Use appropriate methods to design, implement and test programs to achieve functional and non-functional requirements, derived from a simple requirements specification | MO6 | | |
| Module Learning Outcomes | Reference | | | | | | | | | | | | | | | | |
| Demonstrate understanding, and appropriate use, of a variety of notations for the specification of processing rules and algorithms | MO1 | | | | | | | | | | | | | | | | |
| Discuss the relative merits of different programming languages and their use in the development of software for different applications and platforms | MO2 | | | | | | | | | | | | | | | | |
| Demonstrate understanding of the functional role of common software development tools and the use of libraries in the development of software | MO3 | | | | | | | | | | | | | | | | |
| Demonstrate understanding of the structure and syntax of a high level programming language and the use of data structures and syntactic constructs in the implementation of algorithms | MO4 | | | | | | | | | | | | | | | | |
| Discuss the principles of good design and apply these in the development and evaluation of program designs | MO5 | | | | | | | | | | | | | | | | |
| Use appropriate methods to design, implement and test programs to achieve functional and non-functional requirements, derived from a simple requirements specification | MO6 | | | | | | | | | | | | | | | | |
| Contact Hours | <table border="1"> <thead> <tr> <th colspan="2">Independent Study Hours:</th> </tr> </thead> <tbody> <tr> <td>Independent study/self-guided study</td> <td>228</td> </tr> <tr> <td>Total Independent Study Hours:</td> <td>228</td> </tr> <tr> <th colspan="2">Scheduled Learning and Teaching Hours:</th> </tr> <tr> <td>Face-to-face learning</td> <td>72</td> </tr> <tr> <td>Total Scheduled Learning and Teaching Hours:</td> <td>72</td> </tr> <tr> <td>Hours to be allocated</td> <td>300</td> </tr> <tr> <td>Allocated Hours</td> <td>300</td> </tr> </tbody> </table> | Independent Study Hours: | | Independent study/self-guided study | 228 | Total Independent Study Hours: | 228 | Scheduled Learning and Teaching Hours: | | Face-to-face learning | 72 | Total Scheduled Learning and Teaching Hours: | 72 | Hours to be allocated | 300 | Allocated Hours | 300 |

Part 5: Contributes Towards

This module contributes towards the following programmes of study:

Computer Security and Forensics [Feb][FT][GCET][4yrs] BSc (Hons) 2019-20

Computer Security and Forensics [Oct][FT][GCET][4yrs] BSc (Hons) 2019-20

Instrumentation and Control Engineering {Foundation} [Feb][PT][GCET][8yrs] BEng (Hons) 2018-19

Instrumentation and Control Engineering {Foundation} [Oct][PT][GCET][8yrs] BEng (Hons) 2018-19
