

MODULE SPECIFICATION

Part 1: Information			
Module Title	Stress & Dynamics		
Module Code	UFMFH3-30-1	Level	Level 4
For implementation from	2018-19		
UWE Credit Rating	30	ECTS Credit Rating	15
Faculty	Faculty of Environment & Technology	Field	Engineering, Design and Mathematics
Department	FET Dept of Engin Design & Mathematics		
Contributes towards	<p>Mechanical Engineering with Manufacturing {Apprenticeship} [Sep][PT][Frenchay][4yrs] BEng (Hons) 2018-19</p> <p>Aerospace Engineering [Sep][FT][Frenchay][3yrs] BEng (Hons) 2018-19</p> <p>Aerospace Engineering (Design) [Sep][FT][Frenchay][4yrs] MEng 2018-19</p> <p>Aerospace Engineering with Pilot Studies [Sep][SW][Frenchay][5yrs] MEng 2018-19</p> <p>Mechanical Engineering with Manufacturing [Sep][PT][Frenchay][4yrs] BEng (Hons) 2018-19</p> <p>Aerospace Engineering [Sep][SW][Frenchay][5yrs] MEng 2018-19</p> <p>Mechanical Engineering [Sep][SW][Frenchay][5yrs] MEng 2018-19</p> <p>Automotive Engineering [Sep][SW][Frenchay][5yrs] MEng 2018-19</p> <p>Mechanical Engineering (Nuclear) - Not Running BEng (Hons) 2017-18</p> <p>Electronic Engineering (Nuclear) [Sep][FT][Frenchay][5yrs] BEng (Hons) 2018-19</p> <p>Aerospace Engineering Manufacturing [Sep][PT][UCW][4yrs] FdSc 2018-19</p> <p>Mechatronics {Apprenticeship} [Sep][PT][UCW][3yrs] FdSc 2018-19</p> <p>Mechanical Engineering [Sep][PT][UCW][3yrs] FdSc 2018-19</p> <p>Aerospace Engineering with Pilot Studies [Sep][SW][Frenchay][4yrs] BEng (Hons) 2018-19</p> <p>Mechanical Engineering [Sep][FT][BTC][2yrs] FdSc 2018-19</p> <p>Mechanical Engineering [Sep][FT][Frenchay][4yrs] MEng 2018-19</p> <p>Mechanical Engineering [Sep][FT][Frenchay][3yrs] BEng 2018-19</p> <p>Mechanical Engineering [Sep][SW][Frenchay][4yrs] BEng 2018-19</p> <p>Mechanical Engineering [Sep][PT][BTC][3yrs] FdSc 2018-19</p> <p>Aerospace Engineering (Design) [Sep][SW][Frenchay][5yrs] MEng 2018-19</p> <p>Aerospace Engineering (Systems) [Sep][FT][Frenchay][4yrs] MEng 2018-19</p>

Module type:	Standard
Pre-requisites	None
Excluded Combinations	None
Co- requisites	None
Module Entry requirements	None

Part 2: Description

Overview: Two of the key disciplines that underpin many areas of engineering are introduced in this module and supported by practical laboratory exercises. This foundation of knowledge presented here will be used to extend specialist knowledge in future years.

Educational Aims: See Learning Outcomes

Outline Syllabus: Stress Analysis (Semester 1):

Introduction to statics, 3 equations of static equilibrium, reactions at supports, UDL case.

Pin-jointed framework, forces experienced by the joints due to members in compression and tension. Method of Joints,

Method of Joints; Method of sections

Properties of materials, stress, strain, Young's Modulus,

Shear Force and Bending Moment Theory

Introduce stresses in beams and Second Moment of Area

Second moment of area – Parallel axis theorem

Combined bending and end load; Bi –axial bending. Thermal Strain and Intro to 2D and 3D theory

Introduction to thin pressure vessels derivation of formula; Change in volume

Torsion, derivation of the engineering torsion formula,

Composite Shafts, connected in series and parallel

Dynamics (Semester 2):

Displacement, velocity and acceleration: revision of constant acceleration formulae for linear and

STUDENT AND ACADEMIC SERVICES

angular motion

Scalars and vectors: vector notation, addition and multiplication (revision). Relevance to dynamics. Relative and absolute quantities (displacement, velocity etc.).

Newton's laws: Newton's three laws of motion, drawing Free-body and kinetic diagrams for particles and applying Newton's second law to solve problems.

Non-uniform acceleration: using a graphical/numerical method to solve non-uniform acceleration problems, and using integration to solve non-uniform acceleration problems if the function of the acceleration is known.

Work and Energy: derivation of equations for work for various forcing functions, relationship between work and kinetic energy, and derivation of gravitation potential energy and elastic potential energy. Conservation of energy and the energy balance equation.

Momentum and Force Impulse: Definition of momentum, conservation of momentum, elastic and inelastic collisions, impulse of a constant and varying force.

Rotational energy and angular momentum: Rotational kinetic energy and moment of inertia determination. Angular momentum definition and the particular case of a disk.

Torque and Centrifugal Force: definition of torque. Newton's second law for rotating bodies (rigid bodies). Torque impulse, work done by a torque and power transmitted by a torque leads on to equivalents between linear and angular quantities.

Rigid Body Dynamics: Equations of motion for a rigid body, drawing free-body and kinetic diagrams for rigid bodies, applying Newton's laws for rigid body problems.

Springs and Mechanical Oscillation: Natural vibrations, simple harmonic motion. Stiffness of springs, combined stiffness, oscillation of a spring. Oscillation of a pendulum, and introduction to damping and resonance.

Teaching and Learning Methods: Stress delivered in semester 1 (component A); Dynamics delivered in semester 2 (component B).

Contact: 72 hours

Assimilation and skill development: 126 hours

Coursework: 34 hours

Exam preparation: 68 hours

Total: 300 hours

Large group lecture supported by small group tutorial sessions. Study time outside of contact hours will be spent on going through exercises and example problems.

Lab sessions (small groups) will provide experience of empirical methods and will require further non-contact time or assignment preparation.

Scheduled learning includes lectures, tutorials\lab sessions.

Independent learning includes hours engaged with essential reading, assignment preparation and completion etc.

STUDENT AND ACADEMIC SERVICES

Part 3: Assessment			
<p>Component A: Stress Analysis Assessed via end of semester Exam (2 hours, 40%) to assess the students understanding of concepts and techniques and an online assessment on practical work carrying a modest weighting (10%).to encourage engagement and focus on formative function without undue detriment to the overall mark.</p> <p>Component B: Dynamics Assessed via end of semester Exam (2 hours, 40%) to assess the students understanding of concepts and techniques and an online assessment on practical work carrying a modest weighting (10%) to encourage engagement and focus on formative function without undue detriment to the overall mark.</p>			
First Sit Components	Final Assessment	Element weighting	Description
Online Assignment - Component B		10 %	Online e-assessment for practical work
Online Assignment - Component A		10 %	Online e-assessment for practical work
Examination - Component B	✓	40 %	End of semester 2 exam
Examination - Component A		40 %	End of semester 1 exam
Resit Components	Final Assessment	Element weighting	Description
Examination - Component B	✓	50 %	Exam (2 hours)
Examination - Component A		50 %	Exam (2 hours)

Part 4: Teaching and Learning Methods																	
Learning Outcomes	<p>On successful completion of this module students will be able to:</p> <table border="1"> <thead> <tr> <th></th> <th>Module Learning Outcomes</th> </tr> </thead> <tbody> <tr> <td>MO1</td> <td>Show a detailed knowledge and understanding of key principles and results in stress analysis</td> </tr> <tr> <td>MO2</td> <td>Show a detailed knowledge and understanding of key principles and results in dynamics</td> </tr> <tr> <td>MO3</td> <td>Develop an knowledge and understanding of subject specific skills with respect to modelling and solving numerical problems in stress analysis and dynamics, based on knowledge of the relevant engineering principles</td> </tr> <tr> <td>MO4</td> <td>Demonstrate the ability to apply knowledge of theoretical and practical experience to solve problems in the analysis and solution of problems of stress analysis.</td> </tr> <tr> <td>MO5</td> <td>Apply knowledge and experience to investigate and solve problems in the subject area of dynamics</td> </tr> <tr> <td>MO6</td> <td>Show cognitive skills with respect to modelling and simplifying real problems, and applying mathematical methods of analysis, and understanding the capabilities of computer based modelling</td> </tr> <tr> <td>MO7</td> <td>Demonstrate key transferable skills in problem formulation and decision making, interpreting experimental results</td> </tr> </tbody> </table>		Module Learning Outcomes	MO1	Show a detailed knowledge and understanding of key principles and results in stress analysis	MO2	Show a detailed knowledge and understanding of key principles and results in dynamics	MO3	Develop an knowledge and understanding of subject specific skills with respect to modelling and solving numerical problems in stress analysis and dynamics, based on knowledge of the relevant engineering principles	MO4	Demonstrate the ability to apply knowledge of theoretical and practical experience to solve problems in the analysis and solution of problems of stress analysis.	MO5	Apply knowledge and experience to investigate and solve problems in the subject area of dynamics	MO6	Show cognitive skills with respect to modelling and simplifying real problems, and applying mathematical methods of analysis, and understanding the capabilities of computer based modelling	MO7	Demonstrate key transferable skills in problem formulation and decision making, interpreting experimental results
	Module Learning Outcomes																
MO1	Show a detailed knowledge and understanding of key principles and results in stress analysis																
MO2	Show a detailed knowledge and understanding of key principles and results in dynamics																
MO3	Develop an knowledge and understanding of subject specific skills with respect to modelling and solving numerical problems in stress analysis and dynamics, based on knowledge of the relevant engineering principles																
MO4	Demonstrate the ability to apply knowledge of theoretical and practical experience to solve problems in the analysis and solution of problems of stress analysis.																
MO5	Apply knowledge and experience to investigate and solve problems in the subject area of dynamics																
MO6	Show cognitive skills with respect to modelling and simplifying real problems, and applying mathematical methods of analysis, and understanding the capabilities of computer based modelling																
MO7	Demonstrate key transferable skills in problem formulation and decision making, interpreting experimental results
