The module will be delivered using a combination of lectures and laboratory work. Tutorials will be incorporated into the lectures. Laboratory work will involve the design and build of analogue electronic circuits. The focus will be on filter design. Relevant ethical issues will be highlighted and students will be encouraged to consider these further through directed reading.

Part 3: Assessment

A formal exam that contributes 50% towards the final mark of the module. The examination is summative and assesses the students' understanding of concepts and techniques, and their ability to apply them in relatively straightforward problems.

A lab based coursework that contributes 50% towards the final mark of the module.

Formative assessment will be provided as oral feedback throughout the laboratory sessions particularly with respect to the lab exercises and the logbook entries.
