

MODULE SPECIFICATION

Part 1: Information			
Module Title	Statistical Research Methods		
Module Code	UFMFK7-30-3	Level	Level 6
For implementation from	2018-19		
UWE Credit Rating	30	ECTS Credit Rating	15
Faculty	Faculty of Environment & Technology	Field	Engineering, Design and Mathematics
Department	FET Dept of Engin Design & Mathematics		
Contributes towards			
Module type:	Standard		
Pre-requisites	Statistical Modelling 2018-19		
Excluded Combinations	None		
Co- requisites	None		
Module Entry requirements	None		

Part 2: Description
<p>Overview: This module is concerned with the careful use of quantitative research methodology and the application of statistical techniques in empirical research.</p> <p>Educational Aims: See Learning Outcomes.</p> <p>Outline Syllabus: The syllabus includes:</p> <p>Advanced modelling techniques: Binary, ordinal and nominal logistic regression models: application, theoretical underpinning, model diagnostics. Discriminant Analysis: applications and interpretation, theoretical underpinning, model diagnostics. Multivariate Analysis of Variance. Survival Analysis.</p> <p>Biomedical research techniques: Principles of experimental designs relating to medical studies including the clinical control</p>

STUDENT AND ACADEMIC SERVICES

randomised trial (randomisation, replication, blinding, use of controls, trial protocol, and the conduct of CRT); prospective cohort studies, case control studies, cross-sectional studies, longitudinal studies, cross-over trials, and their conduct.

Determination of sample size for a given study.

The analysis of category data arising in a medical context including (odds ratios within and across strata, relative risk, log-linear modelling, sensitivity, specificity, negative predictive value, positive predictive value, evaluating predictive value of a test using Bayes Theorem, ROC curves).

Measures of reliability including Intra Class Correlations, Bland-Altman plots, Cohen's kappa.

Analysis of survival data including the proportional hazards survival model, estimation of survival probabilities, Kaplan-Meier survival curves, log rank tests.

Industrial Studies:

Two-level full and fractional factorial designs, central composite and rotatable designs and process optimisation.

Taguchi methods and their role in product design and quality improvement.

Time Series Analysis:

ARIMA modelling.

Missing data:

Concepts of missingness (MCAR, CAR, NMAR); effects of missing data; methods for handling missing data (e.g. imputation, multiple imputation, mean imputation, last one carried forward, listwise deletion, pairwise deletion); limitations and consequences of missing data.

Meta-analysis:

Introduction to meta-analysis. Systematic reviews, publication bias, effect sizes, random and fixed effects models; examples taken from the empirical literature.

Familwise error rate:

Multiple comparisons in ANOVA (e.g. Tukey's test, Student-Newman-Keuls test, Ryan-Einot-Gabriel-Welch tests, least significant difference), Tamhane's test, Games-Howell test, Hsu's test) and techniques to control Type I error rates (e.g. Bonferroni-Dunn, Hochberg step down, Hochberg step up) and the False Discovery Rate. When to use these tests.

Teaching and Learning Methods: The module is delivered by means of lectures, tutorials/practicals or workshops. To prepare for assessment, students are expected to undertake self-directed learning in addition to the directed learning which supports taught classes:

Contact time: 75 hours

Assimilation and development of knowledge: 150 hours

Assessment: 75 hours

TOTAL: 300 HOURS

Scheduled teaching hours takes the form of two concurrent streams:

Stream 1:

Whole group lectures, used to deliver new material and to consolidate previous material. Weekly computer practical, with activities following on directly from the lecture to develop analytical skills and gain practical experience.

Stream 2:

A fortnightly lecture/workshop session used to introduce major themes and use case studies, published research papers and research examples.

A fortnightly tutorial/practical session used to discuss the themes introduced in the lecture/workshop in Stream 2.

STUDENT AND ACADEMIC SERVICES

Part 3: Assessment			
Component A consists of an examination which assesses students' understanding of concepts and techniques as well as their ability to interpret results within different contexts.			
Component B consists of two short assignments worth 25% each. One assessment will focus on the statistical modelling of data and the second assessment will be on design concepts and the analysis of data to answer a defined research question.			
First Sit Components	Final Assessment	Element weighting	Description
Written Assignment - Component B		25 %	Coursework 1
Written Assignment - Component B		25 %	Coursework 2
Examination - Component A	✓	50 %	Written examination
Resit Components	Final Assessment	Element weighting	Description
Written Assignment - Component B		50 %	Coursework
Examination - Component A	✓	50 %	Written examination

Part 4: Teaching and Learning Methods															
Learning Outcomes	On successful completion of this module students will be able to:														
	<table border="1"> <thead> <tr> <th colspan="2">Module Learning Outcomes</th> </tr> </thead> <tbody> <tr> <td>MO1</td> <td>Appropriately apply advanced statistical techniques in empirical research using modern day software</td> </tr> <tr> <td>MO2</td> <td>Assess model diagnostics to inform empirical model building</td> </tr> <tr> <td>MO3</td> <td>Interpret and explain a wide variety of empirical statistical models in different context (own analyses or research papers)</td> </tr> <tr> <td>MO4</td> <td>Examine limitations of inference from statistical models based on model evaluation techniques and the way the data have been generated</td> </tr> <tr> <td>MO5</td> <td>Show detailed knowledge of the role played by statistical design in medicine and industry</td> </tr> <tr> <td>MO6</td> <td>Conduct literature searches to support empirical investigations and to correctly cite sources of information</td> </tr> </tbody> </table>	Module Learning Outcomes		MO1	Appropriately apply advanced statistical techniques in empirical research using modern day software	MO2	Assess model diagnostics to inform empirical model building	MO3	Interpret and explain a wide variety of empirical statistical models in different context (own analyses or research papers)	MO4	Examine limitations of inference from statistical models based on model evaluation techniques and the way the data have been generated	MO5	Show detailed knowledge of the role played by statistical design in medicine and industry	MO6	Conduct literature searches to support empirical investigations and to correctly cite sources of information
	Module Learning Outcomes														
	MO1	Appropriately apply advanced statistical techniques in empirical research using modern day software													
	MO2	Assess model diagnostics to inform empirical model building													
	MO3	Interpret and explain a wide variety of empirical statistical models in different context (own analyses or research papers)													
	MO4	Examine limitations of inference from statistical models based on model evaluation techniques and the way the data have been generated													
MO5	Show detailed knowledge of the role played by statistical design in medicine and industry														
MO6	Conduct literature searches to support empirical investigations and to correctly cite sources of information														
Contact Hours	Contact Hours														
	Independent Study Hours:														
	Independent study/self-guided study														
	225														

STUDENT AND ACADEMIC SERVICES

	Total Independent Study Hours:	225
	Scheduled Learning and Teaching Hours:	
	Face-to-face learning	75
	Total Scheduled Learning and Teaching Hours:	75
	Hours to be allocated	300
	Allocated Hours	300
Reading List	<p><i>The reading list for this module can be accessed via the following link:</i></p> <p>https://uwe.rl.talis.com/modules/ufmfk7-30-3.html</p>
