

## MODULE SPECIFICATION

Part 1: Information			
Module Title	Structural Design & Inspection		
Module Code	UFMFE9-30-3	Level	Level 6
For implementation from	2019-20		
UWE Credit Rating	30	ECTS Credit Rating	15
Faculty	Faculty of Environment & Technology	Field	Engineering, Design and Mathematics
Department	FET Dept of Engin Design & Mathematics		
Module type:	Standard		
Pre-requisites	None		
Excluded Combinations	None		
Co- requisites	None		
Module Entry requirements	None		

Part 2: Description
<p><b>Overview:</b> The course aims to provide a rounded understanding of structural design and inspection (mechanics of materials, FEA, composites engineering and inspection) so that students are competent with the subject when they work in industry.</p> <p><b>Educational Aims:</b> See Learning Outcomes.</p> <p><b>Outline Syllabus:</b> The syllabus includes:</p> <p>Mechanics of Materials and FEA</p> <p>Energy Methods in Structural Analysis: Strain energy and complementary energy; The principle of the stationary value of the total complementary energy; Unit load method; Flexibility method; Application to deflection problems; Application to the solution of statically indeterminate systems; Total potential energy; The principle of the stationary value of the total potential energy.</p> <p>Weighted Residuals: Approximation of differential equations by the weighted residuals method; Galerkin's, collocation's and subdomains' methods; Application of the weighted residuals to the beam-deflection second order differential equation; Weak formulations; Weighted residuals for the</p>

## STUDENT AND ACADEMIC SERVICES

theory of elasticity.

### Finite Element Method:

Derivation of the FEM from the weighted residuals method; Shape functions, integration and derivation in the FEM; Finite elements for plane stress, plane strain, beam analysis, plates and shells, and 3D continuum structures; ABAQUS finite element software; Defining a FE model with ABAQUS/CAE; ABAQUS implicit versus ABAQUS explicit; Boundary conditions and loads in ABAQUS; Finite elements for plane stress, plane strain, beams, plates and shells and 3D solids in ABAQUS; Material models and yield criterions in ABAQUS.

### Composite Engineering

Classification and structure of composite materials, composition and structural relationships.

Composite materials: matrix materials, fibres, fabrics, core materials.

Calculation of physical and mechanical properties: rule of mixtures, Hart-Smith and the Classical Laminate Analysis method.

Design of composite structures: fundamental principles, design guidelines, balance, symmetry, thickness law.

Testing of composite materials: reasons for importance, destructive and non-destructive methods.

Performance of composite structures: tension, compression, bending, shear, impact toughness, fatigue, failure criterion.

Sustainability and recycling of composites: natural fibres and matrices, reduced weight, conflicts.

### Component Inspection

Inspection principles using machine vision.

Use of software for image-based inspection.

Surface and subsurface inspection techniques.

**Teaching and Learning Methods:** Large group lecture supported by small group tutorial sessions. Study time outside of contact hours will be spent on going through exercises and example problems.

Lab sessions will provide experience of empirical methods, modelling and simulation and will require time outside for assignment preparation.

Scheduled learning: lectures, tutorials, laboratory work and FEA activities.

Independent learning: essential reading, preparation, assignment preparation and completion.

### Contact Hours:

#### Activity:

Contact: 75 hours

Assimilation and skill development: 150 hours

Coursework: 19 hours

Exam preparation: 56 hours

Total: 300 hours

Contact hours include workshop time under technician supervision.

## Part 3: Assessment

The examination (component A) is summative and assesses the students' understanding of concepts and techniques, and their ability to apply them to relatively straightforward problems.

The coursework (component B) is both summative and formative. The assignments provide the students with the opportunity to apply theory and test their understanding of the course material through an applied learning cycle.

## STUDENT AND ACADEMIC SERVICES

Feedback from the coursework is intended to assist students with their preparations for the end-of-year examination.			
<b>First Sit Components</b>	<b>Final Assessment</b>	<b>Element weighting</b>	<b>Description</b>
Written Assignment - Component B		25 %	Finite element analysis assignment
Written Assignment - Component B		25 %	Composite engineering/inspection assignment
Examination - Component A	✓	50 %	Summer Examination (3 hrs)
<b>Resit Components</b>	<b>Final Assessment</b>	<b>Element weighting</b>	<b>Description</b>
Written Assignment - Component B		50 %	Assignment
Examination - Component A	✓	50 %	Examination (3 hrs)

### Part 4: Teaching and Learning Methods

Learning Outcomes	On successful completion of this module students will achieve the following learning outcomes:	
	<b>Module Learning Outcomes</b>	<b>Reference</b>
	Show a detailed knowledge and understanding of key theoretical principles and results	MO1
	Model and simplify real engineering problems	MO2
	Demonstrate key transferable skills in problem formulation and decision-making	MO3
	Design optimum solutions with composite materials	MO4
	Appraise the performance and discuss the key conflicts with composite materials with regard to sustainability and recyclability	MO5
	Calculate the mechanical properties of composite materials and justify their application	MO6
	Appraise the use of machine vision in inspection and testing, its advantages and limitations	MO7
	Develop simple machine vision computer scripts for image-based inspection tasks	MO8
Contact Hours	<b>Independent Study Hours:</b>	
	Independent study/self-guided study	225
	<b>Total Independent Study Hours:</b>	225
	<b>Scheduled Learning and Teaching Hours:</b>	
	Face-to-face learning	75

## STUDENT AND ACADEMIC SERVICES

	<b>Total Scheduled Learning and Teaching Hours:</b>	75
	<b>Hours to be allocated</b>	300
	<b>Allocated Hours</b>	300
Reading List	<i>The reading list for this module can be accessed via the following link:</i> <a href="https://uwe.rl.talis.com/modules/ufmfe9-30-3.html">https://uwe.rl.talis.com/modules/ufmfe9-30-3.html</a>	

### Part 5: Contributes Towards

This module contributes towards the following programmes of study:
