

MODULE SPECIFICATION

Part 1: Information			
Module Title	Computer Networks and Operating Systems		
Module Code	UFCFQ4-30-2	Level	Level 5
For implementation from	2019-20		
UWE Credit Rating	30	ECTS Credit Rating	15
Faculty	Faculty of Environment & Technology	Field	Computer Science and Creative Technologies
Department	FET Dept of Computer Sci & Creative Tech		
Module type:	Standard		
Pre-requisites	Computer and Network Systems 2019-20		
Excluded Combinations	None		
Co- requisites	None		
Module Entry requirements	None		

Part 2: Description
<p>Overview: Pre-requisites: students must take UFCF93-30-1 Computer and Network Systems and UFCFF6-30-1 Programming in C or UFCFC3-30-1 Introduction to OO Systems Development.</p> <p>Educational Aims: See Learning Outcomes</p> <p>Outline Syllabus: Operating Systems: Operating System Organisation models and structures</p> <p>History and implications of using Open Source code in operating systems. Licensing issues and their legal implications.</p> <p>Process and Object Management kernel services, interrupt handlers, scheduling.</p> <p>Inter-process Communication event handling, message passing, synchronous-asynchronous, shared memory.</p> <p>Concurrency and Synchronisation semaphores, critical regions, monitors, message passing, multi-threaded processes.</p> <p>Memory Management Organisation algorithms and policies, Virtual Memory Management.</p>

STUDENT AND ACADEMIC SERVICES

I/O Management Device driver design, Buffering and interrupt handling.

File and Persistent Object Management File organisation, directories and naming, index nodes, disk block management. Network and distributed file systems. Protection and Security Models for secure computing, access control, capability based systems, access control lists.

Virtualisation. History of VMs. Variety of virtualisation – full, partial, para. Emulators, simulators and virtualisation. VM in languages – Java VM.

Embedded and mobile OS. Background to embedded and mobile os. Hardware and software requirements for embedded/mobile. Embedded/mobile OS.

Networked Systems:

Computer network architecture\’s and models. Layered models, peer protocols, the ISO OSI model.

Protocol Specification and Design Specification techniques -FSM, layered protocols, error correction Connection vs connectionless protocols.

Medium Access Control Protocols MAC techniques.

Subnetworks and Internetworks network layer design, routing and switching, addressing and naming network topology.

Transport Services TLIs.

Network and Distributed Systems Management Security issues, fault, monitoring and accounting issues.

TCP/IP protocols IP layer, ICMP, ARP TCP socket programming Applications IPV4 and IPng Administering a TCP IP network.

System Administration Specifying and installing an OS and network Initialise the system for user and applications Install devices, software packages and communication links. Making the system secure, investigation of security strategies Instigation of system maintenance - backup, user control Document system and system modifications

Teaching and Learning Methods: This module will involve 6 hours contact time per fortnight. The time will be divided between lecture sessions and laboratory sessions

Over the course of the academic year students should expect to spend approximately:

Contact time: 72 hours

Assimilation and development of knowledge: 148 hours

Exam preparation: 40 hours

Coursework preparation: 40 hours

Total study time: 300 hours

For the most part the course will be delivered through practicals and lectures. The theoretical content will be covered in lectures. In the practical sessions students will gain understanding through designing and implementing system software components. For the systems administration part of the course the students will be divided into groups and be required to configure and manage a computer system and offer this computing service to an acceptable professional standard to the rest of the cohort.

An extended case-study, supported by focussed tutorials and practicals, will allow the students to follow through an example application from design to implementation, and appreciate the relevance of all the component parts of the module syllabus. Examples of case studies could be: creating a VPN (virtual private network) within the existing network, implementing a firewall/bastion host/proxy security strategy within the network, full automate the user account administration of the system.

STUDENT AND ACADEMIC SERVICES

Part 3: Assessment			
<p>The students will be assessed through a mix of assessed practical worksheets, set assignment tasks and examinations. The worksheets are designed to ensure sustained student engagement whilst the assignment tasks allow the student to demonstrate their mastery of a number of practical skills. The final coursework requires the consolidation of the complete module material.</p> <p>The more theoretical aspects of the course are assessed in the exam. There is an exam at the end of each teaching block. Two exams are used as experience suggests that the material and concepts covered by this module are most successfully examined in relatively small chunks.</p>			
First Sit Components	Final Assessment	Element weighting	Description
Set Exercise - Component B		25 %	Weekly worksheets, signed off on a regular basis by the lab tutor
Report - Component B		25 %	Practical coursework
Examination - Component A		25 %	Exam 1 (2 hours)
Examination - Component A	✓	25 %	Exam 2 (2 hours)
Resit Components	Final Assessment	Element weighting	Description
Report - Component B		50 %	Coursework - report on practical work carried out (demonstrated where appropriate)
Examination - Component A	✓	50 %	Exam (3 hours)

Part 4: Teaching and Learning Methods													
Learning Outcomes	<p>On successful completion of this module students will achieve the following learning outcomes:</p> <table border="1"> <thead> <tr> <th>Module Learning Outcomes</th> <th>Reference</th> </tr> </thead> <tbody> <tr> <td>Show a detailed knowledge and understanding of the design, structure and implementation of modern networked operating systems (NOS) as well as the data structures and interfaces of a NOS</td> <td>MO1</td> </tr> <tr> <td>Write small utility programs, in both script and compiler level languages, that interface to the system primitives</td> <td>MO2</td> </tr> <tr> <td>Build, install, boot, administer and manage a NOS and manage the users on the system</td> <td>MO3</td> </tr> <tr> <td>Understand the networking protocols that underpin the operation of a NOS</td> <td>MO4</td> </tr> <tr> <td>Understand the security problems and solutions on a network</td> <td>MO5</td> </tr> </tbody> </table>	Module Learning Outcomes	Reference	Show a detailed knowledge and understanding of the design, structure and implementation of modern networked operating systems (NOS) as well as the data structures and interfaces of a NOS	MO1	Write small utility programs, in both script and compiler level languages, that interface to the system primitives	MO2	Build, install, boot, administer and manage a NOS and manage the users on the system	MO3	Understand the networking protocols that underpin the operation of a NOS	MO4	Understand the security problems and solutions on a network	MO5
Module Learning Outcomes	Reference												
Show a detailed knowledge and understanding of the design, structure and implementation of modern networked operating systems (NOS) as well as the data structures and interfaces of a NOS	MO1												
Write small utility programs, in both script and compiler level languages, that interface to the system primitives	MO2												
Build, install, boot, administer and manage a NOS and manage the users on the system	MO3												
Understand the networking protocols that underpin the operation of a NOS	MO4												
Understand the security problems and solutions on a network	MO5												
Contact Hours	<table border="1"> <thead> <tr> <th colspan="2">Independent Study Hours:</th> </tr> </thead> <tbody> <tr> <td>Independent study/self-guided study</td> <td>228</td> </tr> <tr> <td>Total Independent Study Hours:</td> <td>228</td> </tr> </tbody> </table>	Independent Study Hours:		Independent study/self-guided study	228	Total Independent Study Hours:	228						
Independent Study Hours:													
Independent study/self-guided study	228												
Total Independent Study Hours:	228												

STUDENT AND ACADEMIC SERVICES

	Scheduled Learning and Teaching Hours:	
	Face-to-face learning	72
	Total Scheduled Learning and Teaching Hours:	72
	Hours to be allocated	300
	Allocated Hours	300
Reading List	<p>The reading list for this module can be accessed via the following link:</p> <p>https://uwe.rl.talis.com/modules/ufcfq4-30-2.html</p>	

Part 5: Contributes Towards

This module contributes towards the following programmes of study:

- Computing {Dual} [Aug][SW][Taylors][4yrs] BSc (Hons) 2018-19
- Software Engineering [Sep][SW][Frenchay][4yrs] BSc (Hons) 2018-19
- Software Engineering [Jan][FT][Northshore][3yrs] BSc (Hons) 2018-19
- Software Engineering {Dual} [Aug][FT][Taylors][3yrs] BSc (Hons) 2018-19
- Software Engineering {Dual} [Mar][FT][Taylors][3yrs] BSc (Hons) 2018-19
- Software Engineering [Sep][FT][Frenchay][3yrs] BSc (Hons) 2018-19
- Computing {Dual} [Aug][FT][Taylors][3yrs] BSc (Hons) 2018-19
- Computing {Dual} [Mar][FT][Taylors][3yrs] BSc (Hons) 2018-19
- Computing {Dual} [Mar][SW][Taylors][4yrs] BSc (Hons) 2018-19
