

ACADEMIC SERVICES

MODULE SPECIFICATION

Part 1: Basic Data							
Module Title	Scientific Practi	ce					
Module Code	USSJT9-30-2		Level	2	Version	1.2	
UWE Credit Rating	30	ECTS Credit Rating	15	WBL modu	ile? No		
Owning Faculty	Health and App			•	Biological, Biomedical and Analytical Sciences		
Department	Biological, Biomedical and Analytical Sciences		Module Type	Standard			
Contributes towards	FdSc Healthcare Science BSc (Hons) Healthcare Science (Life Science)						
Pre-requisites	USSJT6-30-1 Principles in Healthcare Science		Co- requisites	None			
Excluded Combinations	None		Module Entry requirements	None			
First CAP Approval Date	21 st November 2012		Valid from	September 2015			
Revision CAP Approval Date	2 February 2016		Revised with effect from	September 2016			

Part 2: Learning and Teaching			
Learning Outcomes	On successful completion of this module students will be able to (assessment intended for each learning outcome designated by [*] corresponding to assessment section):		
	 Understand the principles underpinning scientific research and evidence- based practice [A1, B1, B2] Understand statistical techniques and their correct application [A1, B2] Participate in research and development projects to explore innovations in 		
	 Healthcare Science [A1, B2] Describe and explain the need for data security and confidentiality within the medical environment [A2] Have an awareness of how to protect the well-being and rights of the 		
	 participants in evidence-based R&D [A1, B2] Conduct a review of scientific literature on an agreed topic [B1] Understand and/or participate in audit activities in healthcare science [A1, B2] 		
Syllabus Outline	This module provides the trainee with opportunities to cover and apply fundamental scientific research and development principles in the context of their programme functional categories. Additionally, they will undertake a basic research and development project, as well as take part in activities relating to audit and continuous improvement of service.		
	Trainees will also put into practice effective study skills, including the use of reflective practice.		
	The scientific method and experimental design: Framing and testing		

	 hypotheses; planning and executing experiments; blocking and factorial experiments; collection, analysis and interpretation of data. Sources of measurement error/variation: Biological variation; technical, systematic and random errors; measuring variation. Concepts in measurement: Precision, accuracy and sensitivity; normal ranges; outliers; false positives/negatives. Relationships between variables: Simple, multiple, linear and non-linear regression analysis; correlation. Comparing populations: Paired and unpaired t-tests; Mann Whitney U and Wilcoxon tests; one- and two-way analysis of variance. Comparing frequencies: Chi-squared goodness-of-fit and contingency. Qualitative methods: Basis, aims and comparison to quantitative; participant observation, In-depth interviews, and focus groups. Audit in Healthcare Science: Principles and practice. Data retrieval, analysis and presentation: 'on-line' searches, including online journals/Google Scholar; use of computer packages (Excel, Mintab, GraphPad Prism, Word) for the analysis of data and the production of 'publication quality' tables, figures, posters and reports. Scientific communication: Methods, style and structure.
Contact Hours	There will be 2 weeks of contact time at UWE in 2 x 1 week blocks. Included in each block week are laboratory workshops, lectures and tutorials. The contact time will equate to approximately 6 hours per block (a total of 12 hours). In addition to the allocated hours on campus learning, students will engage in synchronous and asynchronous online learning. This will comprise a total of approximately 60 hours of online engagement through a combination of lectures, synchronous online tutorials, synchronous and asynchronous and asynchronous and asynchronous and asynchronous discussions, online quizzes, and collaborative group work.
Teaching and Learning Methods	 Students are expected to spend 72 hours on scheduled learning and 228 hours on independent learning. Theoretical material within the module will be presented to the students in the form of regular lectures throughout each of the semesters in the academic year. During those times of work based learning, these lectures will be delivered online and involve a number of technological enhancements. The learning of lecture content will be reinforced through time spent in independent learning by the directed reading of recommended texts and through the use of technology enhanced learning resources that will be provided online. This online learning and engagement will be delivered through several avenues: Synchronous online tutorials in protected learning time where the student will contribute/attend an online activity appropriate to the content at the time at which the academic will be present online to facilitate and lead this scheduled/timetabled session. This tutorial will be themed/planned. Asynchronous discussions in the student's own time (or during protected time where students on the course or in specified groups, and in which the academic is permitted to moderate where necessary, but is not expected to contribute. Synchronous surgery sessions timetabled for a specific time in which the academic will be available online to answer live questions via discussion boards/blogs/collaborate or to respond to questions posted/asked prior to the session. Interactive, online formative quizzes made available either following a particular package of knowledge exchange/learning, or in specified sessions/time periods. Lectures delivered online through a combination of one or more of the following: visual/audio/interactivity/personal formative assessment
	A number of relevant practical sessions will be incorporated during the campus-based blocks in addition to the work-based learning that must be achieved under supervision by a workplace supervisor. Practical sessions will both drive hands-on learning and the

	acquisition of technical skills at both an individual and group working level.						
	The remainder of the independent learning time allocated to the module should be spent preparing written assessments for submission [B1, B2], and undertaking revision for the controlled component [A1].						
	der	Scheduled learning includes lectures, seminars, tutorials, project supervision, demonstration, practical classes and workshops; fieldwork; external visits; work based learning; supervised time in studio/workshop.					
	pre an	Independent learning includes hours engaged with essential reading, case study preparation, assignment preparation and completion etc. These sessions constitute an average time per level as indicated in the table below. Scheduled sessions may vary slightly depending on the module choices you make.

	resources effectively.
	Any essential reading will be indicated clearly, along with the method for accessing it, e.g. students may be expected to purchase a set text, be given or sold a print study pack or be referred to texts that are available electronically, etc. This guidance will be available either in the module handbook, via the module information on Blackboard or through any other vehicle deemed appropriate by the module/programme leaders.
	If further reading is expected, this will be indicated clearly. If specific texts are listed, a clear indication will be given regarding how to access them and, if appropriate, students will be given guidance on how to identify relevant sources for themselves, e.g. through use of bibliographical databases.
	A detailed reading list will be made available through relevant channels, e.g. module handbooks, Blackboard, etc.
Indicative Reading List	Grove, S.K. (2007) Statistics for Health Care Research: A Practical Workbook. London: Saunders.
	Bland, M. (2000) <i>An Introduction to Medical Statistics.</i> 3rd ed. Oxford: Oxford Medical Publications.
	Bland, M. and Peacock, J. (2000) <i>Statistical Questions in Evidence-based Medicine.</i> Oxford: Oxford University Press.
	Motulsky, H.J. (2010) Intuitive Biostatistics. Oxford: Oxford University Press.

	Part 3: Assessment
Assessment Strategy	The Assessment Strategy has been designed to support and enhance the development of both subject-based and more general skills, whilst ensuring that the modules learning outcomes are attained, as described below.
	Component A
	The written exam will provide students with an opportunity to demonstrate both their knowledge on a broad range of topics through a series of short essay questions.
	Continuous assessment will be provided by the use of 3 x 30 minute online activities embedded in the module. These activities will require UWE login. The module leader will have full access to up-to-date data to monitor progress and marks obtained by students. Feedback at this level will also be provided online and will be by review of the tests after they have been completed and will include the correct answers (after the relevant assessment period has concluded).
	The design of these online assessed activities will be varied, for example:
	Timed essay questions
	MCQ Label the structure
	Prioritisation structure
	Component B
	The first element will be a literature review that will support the student's knowledge- base in preparation for the project, and assess their ability to communicate that knowledge-base in a concise and logical form.
	The second element will be a project that will be assessed through a report written in a scientific format (e.g. as per a scientific paper); the emphasis of the project will be

on the interpretation of the data gathered rather than 'proving' the original hypothesis.
Formative feedback is available to students throughout the module through group discussions, and in workshops. Students are provided with formative feed-forward for their exam through a revision and exam preparation session prior to the exam and through the extensive support materials supplied through Blackboard.
All work is marked in line with the Department's Generic Assessment Criteria and conforms to university policies for the setting, collection, marking and return of student work. Where an individual piece of work has specific assessment criteria, this is supplied to the students when the work is set.
This assessment strategy has been designed following best practice on effective assessment from JISC (http://www.jisc.ac.uk/whatwedo/programmes/elearning/assessment/digiassess.aspx) and The Open University's Centre for Excellence in Teaching and Learning (http://www.open.ac.uk/opencetl/centre-open-learning-mathematics-science-computing-and-technology/activities-projects/e-assessment-learning-the-interactive-comp).
Technical design and deployment of the activities will also follow best practice developed at UWE by the Education Innovation Centre in collaboration with academic colleagues across the university. Staff guidance and support are already in place (<u>http://info.uwe.ac.uk/online/Blackboard/staff/guides/summative-assessments.asp</u>).
