

MODULE SPECIFICATION

Part 1: Information			
Module Title	Requirements Engineering		
Module Code	UFCFSD-15-M	Level	Level 7
For implementation from	2020-21		
UWE Credit Rating	15	ECTS Credit Rating	7.5
Faculty	Faculty of Environment & Technology	Field	Computer Science and Creative Technologies
Department	FET Dept of Computer Sci & Creative Tech		
Module type:	Standard		
Pre-requisites	None		
Excluded Combinations	None		
Co- requisites	None		
Module Entry requirements	None		

Part 2: Description
<p>Educational Aims: See Learning Outcomes.</p> <p>Outline Syllabus: The syllabus includes:</p> <p>Introduction to requirements engineering with an emphasis on the engineering dimension to the generic requirements engineering process.</p> <p>The relationship between the requirements engineering process and the overall software development life cycle.</p> <p>Requirements engineering process models including the state of the models and agile software development methods.</p> <p>Methods and techniques for requirements elicitation, analysis, modelling, and specification taking into consideration legal, social, ethical and legal issues.</p> <p>Functional and non-functional requirements with particular reference to methods for identifying and specifying non-functional requirements.</p>

STUDENT AND ACADEMIC SERVICES

The Software Requirements Specifications Document and its significance.

Approaches to bridging the gap between business processes and systems, with particular emphasis on the relationship between business process models and system models.

Requirements management and the importance of the process of change management.

Formal Requirements Specifications.

Methods for Requirements Validation.

State-of-the-art and emerging requirements engineering paradigms, methods, techniques, and processes.

Teaching and Learning Methods: Scheduled learning:

This module will be taught by a combination of lecturing and tutoring in every weekly session. Students will be receiving learning material ahead in advance of the lectures; this will pave the ground for increased interaction during lecture/tutorials in addition to raising potential knowledge exchange between students with industrial background and tutors.

Independent learning:

Students will be expected to learn independently by studying directed readings ahead of weekly-taught sessions in addition to consulting the module's on-line forums. Supportive guidance will be provided to students regarding the most appropriate sources of information such as books, research and practical articles, lectures notes, and requirements specifications templates that will be made available, where possible, via the Blackboard VLE. Such independent learning will yield two outcomes:

It will contribute to higher quality independent learning and hence enhance the guidance and enrichment of the student learning experience; and

It will reinforce higher interactivity (with critical appraisal) in the module's key areas, initiated by individuals in lectures and the module's online forum, and hence it will improve the quality of the anticipated module's learning outcomes.

Contact Hours:

Two contact hours per week for both lecture and tutorial over a duration of twelve weeks.

Part 3: Assessment

The assessment strategy for this module comprises both a written examination and an assignment. The written examination comprises 50% of the module's assessment and is of two hours duration covering key aspects of the learning outcomes.

The assignment comprises the remaining 50% of the module's assessment and is related to requirements modelling exercises and critical evaluation of some requirements engineering issues.

First Sit Components	Final Assessment	Element weighting	Description
Examination (Online) - Component A	✓	50 %	Online Examination (2 hours) 24 hour window
Written Assignment - Component B		50 %	Coursework
Resit Components	Final Assessment	Element weighting	Description
Examination (Online) - Component A	✓	50 %	Online Examination (2 hours) 24 hour window

STUDENT AND ACADEMIC SERVICES

Written Assignment - Component B		50 %	Coursework

Part 4: Teaching and Learning Methods																			
Learning Outcomes	<p>On successful completion of this module students will achieve the following learning outcomes:</p> <table border="1"> <thead> <tr> <th style="text-align: left;">Module Learning Outcomes</th> <th style="text-align: left;">Reference</th> </tr> </thead> <tbody> <tr> <td>Demonstrate a critical understanding of the engineering dimension to the Requirements Engineering (RE) process and its proper positioning and utilisation in the overall software development life cycle model</td> <td>MO1</td> </tr> <tr> <td>Show detailed understanding of the generic requirements engineering process, and other RE process models</td> <td>MO2</td> </tr> <tr> <td>Select and apply particular requirements engineering methods and modelling techniques to particular types of problems, taking into consideration legal, social, ethical and professional issues</td> <td>MO3</td> </tr> <tr> <td>Distinguish between functional and non-functional requirements and know how to specify them using appropriate techniques</td> <td>MO4</td> </tr> <tr> <td>Analyse software requirements and discover conflicts that may arise among requirements</td> <td>MO5</td> </tr> <tr> <td>Provide an overview of business process modelling at enterprise level, and the relationship of business processes to the requirements for supporting computerised systems</td> <td>MO6</td> </tr> <tr> <td>Show critical understanding of the importance of bridging the gap between business processes and system models using state of the art methods and techniques including knowledge-driven and service- oriented requirements engineering frameworks</td> <td>MO7</td> </tr> <tr> <td>Critically assess a relevant RE research area using related journal conference papers, and other appropriate sources</td> <td>MO8</td> </tr> </tbody> </table>	Module Learning Outcomes	Reference	Demonstrate a critical understanding of the engineering dimension to the Requirements Engineering (RE) process and its proper positioning and utilisation in the overall software development life cycle model	MO1	Show detailed understanding of the generic requirements engineering process, and other RE process models	MO2	Select and apply particular requirements engineering methods and modelling techniques to particular types of problems, taking into consideration legal, social, ethical and professional issues	MO3	Distinguish between functional and non-functional requirements and know how to specify them using appropriate techniques	MO4	Analyse software requirements and discover conflicts that may arise among requirements	MO5	Provide an overview of business process modelling at enterprise level, and the relationship of business processes to the requirements for supporting computerised systems	MO6	Show critical understanding of the importance of bridging the gap between business processes and system models using state of the art methods and techniques including knowledge-driven and service- oriented requirements engineering frameworks	MO7	Critically assess a relevant RE research area using related journal conference papers, and other appropriate sources	MO8
Module Learning Outcomes	Reference																		
Demonstrate a critical understanding of the engineering dimension to the Requirements Engineering (RE) process and its proper positioning and utilisation in the overall software development life cycle model	MO1																		
Show detailed understanding of the generic requirements engineering process, and other RE process models	MO2																		
Select and apply particular requirements engineering methods and modelling techniques to particular types of problems, taking into consideration legal, social, ethical and professional issues	MO3																		
Distinguish between functional and non-functional requirements and know how to specify them using appropriate techniques	MO4																		
Analyse software requirements and discover conflicts that may arise among requirements	MO5																		
Provide an overview of business process modelling at enterprise level, and the relationship of business processes to the requirements for supporting computerised systems	MO6																		
Show critical understanding of the importance of bridging the gap between business processes and system models using state of the art methods and techniques including knowledge-driven and service- oriented requirements engineering frameworks	MO7																		
Critically assess a relevant RE research area using related journal conference papers, and other appropriate sources	MO8																		
Contact Hours	<table border="1"> <thead> <tr> <th colspan="2">Independent Study Hours:</th> </tr> </thead> <tbody> <tr> <td style="text-align: center;">Independent study/self-guided study</td> <td style="text-align: center;">126</td> </tr> <tr> <td style="text-align: center;">Total Independent Study Hours:</td> <td style="text-align: center;">126</td> </tr> <tr> <th colspan="2">Scheduled Learning and Teaching Hours:</th> </tr> <tr> <td style="text-align: center;">Face-to-face learning</td> <td style="text-align: center;">24</td> </tr> <tr> <td style="text-align: center;">Total Scheduled Learning and Teaching Hours:</td> <td style="text-align: center;">24</td> </tr> <tr> <td>Hours to be allocated</td> <td style="text-align: center;">150</td> </tr> <tr> <td>Allocated Hours</td> <td style="text-align: center;">150</td> </tr> </tbody> </table>	Independent Study Hours:		Independent study/self-guided study	126	Total Independent Study Hours:	126	Scheduled Learning and Teaching Hours:		Face-to-face learning	24	Total Scheduled Learning and Teaching Hours:	24	Hours to be allocated	150	Allocated Hours	150		
Independent Study Hours:																			
Independent study/self-guided study	126																		
Total Independent Study Hours:	126																		
Scheduled Learning and Teaching Hours:																			
Face-to-face learning	24																		
Total Scheduled Learning and Teaching Hours:	24																		
Hours to be allocated	150																		
Allocated Hours	150
