

## MODULE SPECIFICATION

| Part 1: Information       |   |                    |                                     |
|---------------------------|---|--------------------|-------------------------------------|
| Module Title              | Industrial Applications of Vision and Automation  |                    |                                     |
| Module Code               | UFMFCC-15-M   | Level              | Level 7                             |
| For implementation from   | 2018-19   |                    |                                     |
| UWE Credit Rating         | 15  | ECTS Credit Rating | 7.5                                 |
| Faculty                   | Faculty of Environment & Technology   | Field              | Engineering, Design and Mathematics |
| Department                | FET Dept of Engin Design & Mathematics  |                    |                                     |
| Contributes towards       | Mechanical Engineering [Sep][FT][Frenchay][1yr] MSc 2018-19<br>Mechanical Engineering [Sep][PT][Frenchay][2yrs] MSc 2018-19 |                    |                                     |
| Module type:              | Standard  |                    |                                     |
| Pre-requisites            | None  |                    |                                     |
| Excluded Combinations     | None  |                    |                                     |
| Co- requisites            | None  |                    |                                     |
| Module Entry requirements | None  |                    |                                     |

| Part 2: Description   |
|---|
| <p><b>Educational Aims:</b> See Learning Outcomes</p> <p><b>Outline Syllabus:</b> The syllabus includes:</p> <p>General introduction, lectures and workshops on relevant technical aspects of automation and vision.</p> <p>Guest lectures and component inspection in practice.</p> <p>Guest lectures and student-led workshops about self-directed research on technical topics and</p> |

## STUDENT AND ACADEMIC SERVICES

their application to industry.

Guest lectures and component inspection in practice.

Project in pairs on a theoretical problem in the field.

**Teaching and Learning Methods:** Scheduled Learning:

After a few introductory lectures/discussions, the module will assume a range of modern teaching styles, including:

Student-led workshops where the students work in teams to research a particular topic and present the results to the rest of the group via a presentation and workshop session.

Guest lectures from industry experts and technical lectures from UWE staff.

Tutorials using computer rooms.

Independent learning:

Written assignment.

Small project in pairs (partly supervised, but mainly independent).

Background reading and literature surveying.

Self-study in preparation for all areas covered in scheduled learning in addition to preparation of workshops.

Work-based learning is applicable to those students enrolled on the course via the work-based learning scheme. The precise nature of the learning methods in this case will depend on the current experience and expertise of the student and the nature of the employer. It will be expected that one or more coursework elements may be substituted by reports on relevant work in practice and oral presentations. This work will be completed individually, but with a small amount of input from the students' employers where necessary.

Contact: 44 hours

Self-directed learning: 36 hours

Course work: 70 hours

Exam preparation: 0

Total hours: 150

### Part 3: Assessment

Component A

EX1: Group student workshops for Automation, Vision and Management

Component B

CW1: Industry assignment (individual written report, 1,500 words)

CW2: Technical project in groups of two (via technical report, 2,000 words)

EX1 is aimed to assess the students' research skills, technical competence, presentation skills and group work.

Controlled conditions will be applied in that the assessment is based entirely on what is observed in the scheduled time period (1hr). While students will be working as a group, only the part of the presentation/workshop delivered by the individual will be assessed.

CW1 assesses the students' understanding of applications of automation and vision and the various approaches to solving problems in the field. It also assesses the written presentational skills in a substantial written piece.

CW2 assesses the overall technical, project, research and presentational skills of the student. Again this will involve

## STUDENT AND ACADEMIC SERVICES

a substantial individual report. One or more coursework elements may be substituted for work-based learning reports as described in the Teaching and Learning section above.

Second assessment opportunity.

Coursework may be re-submitted with workshops replaced by presentations to staff only.

| First Sit Components       | Final Assessment | Element weighting | Description   |
|----------------------------|------------------|-------------------|---|
| Report - Component B       |                  | 30 %              | Industry assignment (individual written report) (CW1) 1,500 words                                       |
| Project - Component B      | ✓                | 45 %              | Technical project in groups of two (CW2) 2,000 words  |
| Group work - Component A   |                  | 25 %              | Group workshop:<br>Students' research skills, technical competence, presentation skills and group work. |
| Resit Components           | Final Assessment | Element weighting | Description   |
| Report - Component B       |                  | 30 %              | Industry assignment (individual written report) (CW1) 1,500 words                                       |
| Project - Component B      | ✓                | 45 %              | Individual technical project (CW2) 2,000 words  |
| Presentation - Component A |                  | 25 %              | Individual presentation (EX1)   |

STUDENT AND ACADEMIC SERVICES

| <b>Part 4: Teaching and Learning Methods</b> |   |  |
|--|---|--|
| Learning Outcomes                            | On successful completion of this module students will be able to: |  |
|  | <b>Module Learning Outcomes</b>                                   |  |
|  | MO1   | Apply ideas from machine vision and automation to real-world industrial problems in manufacturing and quality control  |
|  | MO2   | Develop software based on image analysis and computer vision to solve industrial component inspection problems   |
|  | MO3   | Critically analyse potential solutions (each with pros and cons) to automation problems and apply financial and technical arguments to each  |
|  | MO4   | Research novel methods for automation and vision and organise findings into both written and oral forms  |
|  | MO5   | Effectively distribute workloads between members of a small team and manage projects accordingly   |
| Contact Hours                                | <b>Contact Hours</b>  |  |
|  | <b>Independent Study Hours:</b>                                   |  |
|  | Independent study/self-guided study                               | 106  |
|  | <b>Total Independent Study Hours:</b>                             | 106  |
|  | <b>Scheduled Learning and Teaching Hours:</b>                     |  |
|  | Face-to-face learning   | 44   |
|  | <b>Total Scheduled Learning and Teaching Hours:</b>               | 44   |
|  | <b>Hours to be allocated</b>                                      | 150  |
|  | <b>Allocated Hours</b>  | 150  |
|  | Reading List  | <p>The reading list for this module can be accessed via the following link:</p> <p><a href="https://uwe.rl.talis.com/modules/ufmfcc-15-m.html">https://uwe.rl.talis.com/modules/ufmfcc-15-m.html</a></p> |
