

MODULE SPECIFICATION

Part 1: Information							
Module Title	Drugs	Drugs and Toxicology					
Module Code	USSK	(AV-30-2 Level 2					
For implementation from	Septe	mber 2017					
UWE Credit Rating	30		ECTS Credit Rating	15			
Faculty	Health Scien	h and Applied ces	Field	Applied Sciences			
Department	Department of Applied Sciences						
Contributes towards	MSci Forensic Science MSci Forensic Science (with Foundation Year) BSc Forensic Science BSc Forensic Science (with Foundation Year)						
Module type:	Standard						
Pre-requisites		USSJRT-30-1 Chemistry in Context					
Excluded Combinations		USSKB3-15-2 Drugs & Disease					
Co- requisites		None					
Module Entry requireme	nts	N/A					

Part 2: Description

This module examines the boundary between a therapeutic agent or medicine and a poison

Origins and characteristics of poisons/medicines, including exposure/administration.

The cholinergic system – weaponised chemicals to medicines.

The principles and practice of pharmacokinetics & pharmacodynamics. Metabolism of drugs and toxins - absorption, distribution, biotransformation and excretion.

The identification and quantification of drugs and poisons in biological fluids. Consideration of interferences and interpretation issues relating to forensic toxicology.

The fundamental concepts of molecular biology and molecular genetics and their impact upon drug discovery, development and toxicology.

The concept of selective toxicity and the mechanisms by which drugs achieve selectively toxic effects..

Genotoxic agents - fundamentals of cell proliferation and the role of normal, disordered and altered gene function in diseases such as leukaemia and solid tumours.

Synergy and antagonism between chemicals within the body.

The foundational principles and mechanisms of toxicology in relation to drug safety evaluation.

Part 3: Assessment

The Assessment Strategy has been designed to support and enhance the development of both subject-based and employability skills, whilst ensuring that the modules Learning Outcomes are attained, as described below.

The coursework comprises two elements:

The first is a Practical Portfolio which is based on the laboratory and workshop series. Successful completion of this element requires the detailed recording of data followed by analysis, interpretation and discussion of these data. The recording and analysis of laboratory data is a vital skill for science students consequently this assessment can described as an assessment to enhance employability and learning.

The second element is an in-session assessment of a research literature review which has been directed by tutors. Students will be given advice on appropriate techniques for collecting, identifying and assimilating data. The ability to assess and digest research data is a highly sought after graduate skill.

The controlled component is two written exams. These will be in 1.5 hours durations which is consistent with the Department's assessment strategy for Level 2 modules. These assessments will provide students with an opportunity to demonstrate both their knowledge on a broad range of topics through a series of short answer questions, and more in-depth knowledge though a selection of medium length questions. They will test a range of the learning outcomes and will provide a valuable learning experience through recalling and demonstrating knowledge which will be of benefit when progressing to final year modules.

Formative feedback is available to students throughout the module through group discussions, practical classes and in workshops. Students are provided with formative feed-forward for their exam through a revision and exam preparation session prior to the exam and through the extensive support materials supplied through Blackboard.

All work is marked in line with the Department's Generic Assessment Criteria and conforms with university policies for the setting, collection, marking and return of student work. Where an individual piece of work has specific assessment criteria, this is supplied to the students when the work is set.

Identify final timetabled piece of assessment (component and element)	A	2

Learning Outcomes	On successful completion of this module students will be able to:								
	 Communicate an appropriate level of understanding of the range and variation of toxic materials, and of their occurrence and possible routes of entry into the body (assessed in Components A1, A2, B2). Describe the sources, development, formulation, control and administration of drugs, poisons and toxic materials (assessed in Components A1, A2, B1). Discuss the significance of chemical properties and concentration gradients of potential drugs and poisons, to absorption, distribution, biotransformation and excretion (that is, pharmacokinetics) (assessed in Components A2, B1). Undertake practical work to examine the characteristics of medicines/toxins, and present, analyse and interpret these data (assessed in Component B1). A variety of learning approaches will be used. Taught sessions will utilise TEL where possible, to support a pedagogy of Inductive Learning where the students will engage in facilitated activities such as lectorials, debates, case studies, problem based learning etc. Practical laboratory sessions will provide experience of techniques relevant to the area and the chemical sciences in general. Practical, and workshop sessions will provide opportunities for data handling and interpretation, problem solving and discussions with academic staff. Lectorials will provide contexts and overviews of topics to guide student-centred learning. Wherever possible, lectorials are supplemented by audio-visual material (e.g. BoB) showing specific examples relevant to toxicology and its practice based context. Student independent learning (>70% of module allocated time) will be supported with interactive revision material, practical workbooks, and the University's E-Learning Environment (Blackboard). 								
Key Information Sets Information	Key Information Sets (KIS) are produced at programme level for all programmes that this module contributes to, which a requirement is set by HESA/HEFCE. KIS are comparable

Reading List	All students will be encouraged to make full use of the print and electronic resources available to them through membership of the University. These include a range of electronic journals and a wide variety of resources available through web sites and information gateways. The University Library's web pages provide access to subject relevant resources and services, and to the library catalogue. Many resources can be accessed remotely. Students will be presented with opportunities within the curriculum to develop their information retrieval and evaluation skills in order to identify such resources effectively. Any essential reading will be indicated clearly, along with the method for accessing it, e.g. students may be expected to purchase a set text, be given or sold a print study pack or be referred to texts that are available electronically, etc. This guidance will be available either in the module handbook, via the module information on Blackboard or through any other vehicle deemed appropriate by the module/programme leaders. If further reading is expected, this will be indicated clearly. If specific texts are listed, a clear indication will be given regarding how to access them and, if appropriate, students will be given guidance on how to identify relevant sources for themselves, e.g. through use of bibliographical databases.							
	A detailed reading list will be made available through relevant channels, e.g. module handbooks, Blackboard, etc.
