

MODULE SPECIFICATION

Part 1: Information			
Module Title	Platform and Major Systems		
Module Code	UFMFRH-15-M	Level	Level 7
For implementation from	2018-19		
UWE Credit Rating	15	ECTS Credit Rating	7.5
Faculty	Faculty of Environment & Technology	Field	Engineering, Design and Mathematics
Department	FET Dept of Engin Design & Mathematics		
Contributes towards			
Module type:	Project		
Pre-requisites	None		
Excluded Combinations	None		
Co- requisites	None		
Module Entry requirements	None		

Part 2: Description
<p>Educational Aims: The module aims to provide an advanced study of the major aircraft systems and their interactions when combined within an aircraft platform.</p> <p>Outline Syllabus: The syllabus includes:</p> <p>Introduction: The properties, technologies, applications, and development processes that differentiate aircraft systems.</p> <p>Systems: The variety of systems that exist within an aircraft, their individual functions and required properties, and the interactions between them that is required to control the aircraft.</p> <p>Architectures: Currently available system platform architectures, their advantages and disadvantages in terms of design, operation, suitability, maintenance and life cycle. The likely evolution of such architectures in the future.</p> <p>Hardware: The challenges and solutions associated with creating reliable hardware components</p>

STUDENT AND ACADEMIC SERVICES

and subsystems capable of surviving in hostile airborne environments.

Software: The challenges and solutions associated with creating reliable, trustworthy and robust software for safety-critical avionics applications.

Data Communications: The properties of various specialist data-transmission standards available for integration of avionics units, their advantages and disadvantages.

Analysis: The tools and techniques available for systematic capturing, abstracting and analysis of the combined behaviour of interacting systems at a platform level.

Modelling: The use of tools and techniques available for creation of dynamic system models.

Testing: The use of tools and techniques available for generating repeatable tests for created dynamic system models.

Teaching and Learning Methods: The module includes presented material and group laboratory project work so that students can experience how multiple complex aircraft systems (including their controlling avionics and sensor/actuator suites) interact.

Part 3: Assessment

The assessment will bring all the concepts together via the case study, which is based on real projects from the organisation.

It consists of a single submission – maximum 4000 words, comprising:

A group report describing and reflecting on the team coursework performed during and outside scheduled contact periods – maximum 2000 words. This element is expected to pick up on the technical details of the project, as per the learning outcomes.

An individual report, reflecting and speculating on the implications of the module content for his/her own experience – maximum 2000 words. This element is expected to focus on the individual's own learning experience, both the technical skills learnt and the team working/business skills required to achieve the project.

This submission will show how well the team worked on the case study to meet the organisation's capability requirements, and providing an individual reflection of the activity for personal career development.

Note: the re-sit submission will consist of an individual reflection. This will be undertaken with respect to a suitable group project report submitted by the rest of the relevant team. It will be a maximum of 4000 words.

First Sit Components	Final Assessment	Element weighting	Description
Report - Component A		50 %	Group project report
Report - Component A	✓	50 %	Individual reflection
Resit Components	Final Assessment	Element weighting	Description
Report - Component A	✓	100 %	Individual reflection based on a suitable group project

Part 4: Teaching and Learning Methods																					
Learning Outcomes	<p>On successful completion of this module students will be able to:</p> <table border="1"> <thead> <tr> <th colspan="2" style="text-align: center;">Module Learning Outcomes</th> </tr> </thead> <tbody> <tr> <td>MO1</td> <td>Examine and differentiate the function and configuration of various aircraft system architectures</td> </tr> <tr> <td>MO2</td> <td>Interpret and predict the interactions between multiple asynchronous systems</td> </tr> <tr> <td>MO3</td> <td>Gain an understanding of how system interaction leads to emergent properties that may enhance or degrade a platform's performance</td> </tr> <tr> <td>MO4</td> <td>Manage the interfaces between multiple systems at a communication and functional level</td> </tr> <tr> <td>MO5</td> <td>Show cognitive skills with respect to modelling and simplifying real problems</td> </tr> <tr> <td>MO6</td> <td>Define and develop suitable testing methods for evaluating a system</td> </tr> <tr> <td>MO7</td> <td>Recognise, explain and apply the need for a platform level approach to system design</td> </tr> <tr> <td>MO8</td> <td>Critically evaluate candidate designs for component systems in terms of their platform level implications</td> </tr> <tr> <td>MO9</td> <td>Reflect and comment on the role of modelling and analysis in platform level system design</td> </tr> </tbody> </table>	Module Learning Outcomes		MO1	Examine and differentiate the function and configuration of various aircraft system architectures	MO2	Interpret and predict the interactions between multiple asynchronous systems	MO3	Gain an understanding of how system interaction leads to emergent properties that may enhance or degrade a platform's performance	MO4	Manage the interfaces between multiple systems at a communication and functional level	MO5	Show cognitive skills with respect to modelling and simplifying real problems	MO6	Define and develop suitable testing methods for evaluating a system	MO7	Recognise, explain and apply the need for a platform level approach to system design	MO8	Critically evaluate candidate designs for component systems in terms of their platform level implications	MO9	Reflect and comment on the role of modelling and analysis in platform level system design
Module Learning Outcomes																					
MO1	Examine and differentiate the function and configuration of various aircraft system architectures																				
MO2	Interpret and predict the interactions between multiple asynchronous systems																				
MO3	Gain an understanding of how system interaction leads to emergent properties that may enhance or degrade a platform's performance																				
MO4	Manage the interfaces between multiple systems at a communication and functional level																				
MO5	Show cognitive skills with respect to modelling and simplifying real problems																				
MO6	Define and develop suitable testing methods for evaluating a system																				
MO7	Recognise, explain and apply the need for a platform level approach to system design																				
MO8	Critically evaluate candidate designs for component systems in terms of their platform level implications																				
MO9	Reflect and comment on the role of modelling and analysis in platform level system design																				
Contact Hours	<table border="1"> <thead> <tr> <th colspan="2" style="text-align: center;">Contact Hours</th> </tr> </thead> <tbody> <tr> <td colspan="2" style="text-align: center;">Independent Study Hours:</td> </tr> <tr> <td style="text-align: center;">Independent study/self-guided study</td> <td style="text-align: center;">114</td> </tr> <tr> <td style="text-align: center;">Total Independent Study Hours:</td> <td style="text-align: center;">114</td> </tr> <tr> <td colspan="2" style="text-align: center;">Scheduled Learning and Teaching Hours:</td> </tr> <tr> <td style="text-align: center;">Face-to-face learning</td> <td style="text-align: center;">36</td> </tr> <tr> <td style="text-align: center;">Total Scheduled Learning and Teaching Hours:</td> <td style="text-align: center;">36</td> </tr> <tr> <td style="text-align: center;">Hours to be allocated</td> <td style="text-align: center;">150</td> </tr> <tr> <td style="text-align: center;">Allocated Hours</td> <td style="text-align: center;">150</td> </tr> </tbody> </table>	Contact Hours		Independent Study Hours:		Independent study/self-guided study	114	Total Independent Study Hours:	114	Scheduled Learning and Teaching Hours:		Face-to-face learning	36	Total Scheduled Learning and Teaching Hours:	36	Hours to be allocated	150	Allocated Hours	150		
Contact Hours																					
Independent Study Hours:																					
Independent study/self-guided study	114																				
Total Independent Study Hours:	114																				
Scheduled Learning and Teaching Hours:																					
Face-to-face learning	36																				
Total Scheduled Learning and Teaching Hours:	36																				
Hours to be allocated	150																				
Allocated Hours	150																				
Reading List	<p>The reading list for this module can be accessed via the following link:</p> <p>https://uwe.rl.talis.com/modules/ufmfrh-15-m.html</p>
