

## **MODULE SPECIFICATION**

Part 1: Information						
Module Title	Grassroots Planning	rassroots Planning				
Module Code	UBGMYN-15-M	Level	Level 7			
For implementation from	2018-19	018-19				
UWE Credit Rating	15	ECTS Credit Rating	7.5			
Faculty	Faculty of Environment & Technology	Field	Geography and Environmental Management			
Department	FET Dept of Geography & Envrnmental Mgmt					
Contributes towards	Social Research (Sustainable Futures) [Sep][FT][Frenchay][1yr] MRes 2018-19 Social Research (Sustainable Futures) [Sep][PT][Frenchay][2yrs] MRes 2018-19					
Module type:	Project					
Pre-requisites	None	None				
Excluded Combinations	None	None				
Co- requisites None						
Module Entry requireme	nts None	None				

# Part 2: Description

**Educational Aims:** The module will provide an opportunity to identify, and develop practical experience, in creating some of the engagement tools that are used in contemporary practice today and well as critically analysing and assessing the legitimacy of different forms of 'grassroots' planning.

**Outline Syllabus:** Planning in the UK was created with strong democratic governance, with democratic approval being embedded into the decision making processes associated with both plan-making and development management. While achieving representative democracy remains a key objective for government, effort has also been directed to generating greater levels of participative democracy within planning itself. The 1969 report 'People and Planning' outlined a

#### STUDENT AND ACADEMIC SERVICES

strategy for encouraging greater openness and involvement across the system, principles that have been maintained and strengthened over the last forty years. Local planning authorities across the UK are characterised by the considerable effort that they now direct towards facilitating and documenting engagement activity, while developers are also encouraged (and increasingly required) to ensure that their development proposals are developed in collaboration with the community. Charity organisations (such as the National Trust) are also very active in forging links between the different communities they work with and the planning objectives they might have.

Developing and implementing a successful engagement strategy inevitably takes time and, in many cases, significant resource. Consequently, despite the many benefits that greater involvement can bring (such as delivering better schemes and possibly faster decisions), actions for encouraging greater inclusiveness are often at odds with measures to streamline and 'speed up' the planning system. For instance, despite the recent promotion of localism and introduction of statutory neighbourhood plans, equally recent measures to extend permitted development rights and to fast track major infrastructure projects have led to contrary accusations about 'local say' being challenged.

A variety of engagement techniques now exist, with these being applied in a variety of scenarios either independently or in combination. Although these tools are becoming increasingly sophisticated and innovative, a continuing challenge is for them to become appealing and accessible to all members of society. Targeting so- called hard to reach groups, such as the young, remains a key goal for those seeking to encourage collaboration.

In light of this context, the module focuses on the relationship between people and planning. It outlines why society (in the broadest sense) should become involved and how plans and projects can be positively shaped in response to these interactions. In addition to presenting the case for planning, the module also identifies the actors, stakeholders and policy arenas that are, or should be, involved. The module identifies the type of attitude that different groups tend to have and how the planning system, through advocacy and effective negotiation, is intended to establish some common ground. As part of this, students will be asked to consider the role of the professional planner, including the role for professional ethics.

The concept of engaging with a 'community' is deconstructed, with the module exploring the debates about what a community is, and what its role should be in the planning system. Similarly, the module will also encourage academic debate and discussion around other important terms such as 'equality', 'neighbourhood', 'involvement', 'participation' and 'engagement'. It will raise questions about where decision should be taken, and questions of scale and democracy which relate to this. To do so, it will cover 'bottom up' planning, be it in legitimate forms of neighbourhood plans and civic engagement, and more radical approaches such as protest groups, self-builders and activist movements.

By way of a summary, the syllabus will cover the following themes:

The purpose and principles for effective participation, with emphasis given to defining and critically analysing key terms such as inclusion, citizenship, identity, diversity and equality.

The definition of different interest and policy groups and integrating these together through the planning process.

Changing institutional arrangements - governance, partnership working, power sharing, theory of collaborative planning, implications for how stakeholders will become involved.

Theories and debates concerning the definition and delineation of 'communities' and 'neighbourhoods'.

Developing the aims and objectives for an effective community/stakeholder and political engagement strategy.

Acquiring and critically reviewing information about a community and the stakeholders and actors it supports.

### STUDENT AND ACADEMIC SERVICES

Strategies for involving 'hard to reach' groups.

Capacity building for effective involvement.

Acting upon, and documenting, engagement activity.

Skills for promoting effective engagement and involvement.

**Teaching and Learning Methods:** Scheduled learning includes lectures, seminars, workshops and demonstration master classes as well as local field work.

Independent learning includes essential and recommended reading (5.5 hours per week = 55 hours) and preparing for and completing assessment (4.5 hours per week = 45 hours).

Contact time: 36 hours

Assimilation and development of knowledge: 74 hours

Assessment: 40 hours

### Part 3: Assessment

The module will be assessed by a single component of assessment that will take the form of a critical assessment of public involvement in planning. The output for this assessment will be a report, which will critique and analyse the chosen case on the basis of academic literature and tools and techniques for community planning. It will outline in detail the case study (contemporary or historic, UK or international), demonstrating an understanding of both the demographics/socio-economic makeup of the area, and of the relevant policy context for planning and community involvement. It will critically analyse the case on the basis of the academic and theoretical literature covered in the module, but also consider how, in practical terms, the case either contributes to good practice, or could have been improved (or both). This will include consideration of the role planners can play in developing this best practice, and how they can develop their professional knowledge as reflexive practitioners by using theory to critique practice.

The assessment will use, and extend, the range of skills developed in the Masters degree and create a substantial piece of work. A limit of 3,500 words will be applied to the report; reference will be made to the university's word count policy in doing so.

Re-sit work will follow the same broad format.

Designing out plagiarism: The module's assessment has been designed to minimise plagiarism. Individual responses will be needed to the report brief which will be discussed and agreed with teaching staff during the module.

Education for Sustainable Development: The module provides a significant contribution to the ESD on the basis that community engagement is a key goal for empowering and inspiring change towards more positive outcomes. Recognising the diversity of a community is a key goal for planners and designers.

First Sit Components	Final Assessment	Element weighting	Description
Report - Component A	✓	100 %	Report (3500 words equivalent)
Resit Components	Final Assessment	Element weighting	Description
