

Module Specification

Igneous and Metamorphic Petrology

Version: 2023-24, v2.0, 27 Jul 2023

Contents

Module Specification	1
Part 1: Information	2
Part 2: Description	2
Part 3: Teaching and learning methods	3
Part 4: Assessment.....	4
Part 5: Contributes towards	6

Part 1: Information

Module title: Igneous and Metamorphic Petrology

Module code: UBGMK8-15-2

Level: Level 5

For implementation from: 2023-24

UWE credit rating: 15

ECTS credit rating: 7.5

Faculty: Faculty of Environment & Technology

Department: FET Dept of Geography & Environmental Mgmt

Partner institutions: None

Field: Geography and Environmental Management

Module type: Module

Pre-requisites: None

Excluded combinations: None

Co-requisites: None

Continuing professional development: No

Professional, statutory or regulatory body requirements: None

Part 2: Description

Overview: An exploration of mineralogy and geochemistry resulting from the key igneous and metamorphic processes which impact global and regional geology, and how they can be observed in rock specimens.

Features: Module Entry Requirements:
Students must have 60 credits at Level 1

Educational aims: The purpose of the module is to introduce students to advanced mineralogical processes, and the use of thin section and geochemical analysis to interpret complex igneous and metamorphic processes through mineralogy, textures, and microstructure. Students will become familiar with phase diagrams, solid solution series, metamorphic phase changes, and the fractional crystallisation processes leading to magma evolution. By the end of the module students will be competent in petrographic microscopy and handling and interpreting a range of geochemical data.

Outline syllabus: The syllabus includes:

Classification and distribution of igneous rocks, association with plate margins.

Ultrabasic and basic igneous rocks.

Basalts, composition, oceanic crust.

Andesites, composition.

Origin of granites, continental crust composition.

Classification and distribution of metamorphic rocks, mineral assemblages.

Metamorphic reactions, P-T diagrams, Barrow's zones.

Low pressure metamorphism, pelites.

Migmatites, partial melting.

Contact metamorphism and mineral assemblages.

Part 3: Teaching and learning methods

Teaching and learning methods: Scheduled learning on this module includes lectures, demonstrations and practical classes. The residential fieldwork sessions will aid knowledge and skills development and broaden students' experience of field geology.

Independent learning includes hours engaged with essential reading, completion of practical work, assignment preparation and completion. These sessions constitute an average time:

Students will receive, on average, 3 hours' contact time per week during one

Teaching Block. This will be predominantly in the form of keynote lectures, covering the principles and concepts relating to igneous and metamorphic rock formation and occurrence, and practical sessions, in which students will examine igneous and metamorphic rocks in hand specimen and thin section. The practical sessions will be introduced by demonstrations. There will be a residential field excursion for students to examine igneous and metamorphic rocks and rock associations in outcrop. One-to-one support will be provided during field and practical sessions and via email.

Module Learning outcomes: On successful completion of this module students will achieve the following learning outcomes.

MO1 Identify and interpret igneous and metamorphic rocks in outcrop, hand specimen and thin section

MO2 Demonstrate knowledge and understanding of principles governing mineral assemblages in metamorphic rocks

MO3 Appraise and interpret tectonic associations of metamorphic and igneous rocks and the processes leading to creation of oceanic and continental crust

MO4 Demonstrate independent engagement with academic literature and critically evaluate published results and interpretations

Hours to be allocated: 150

Contact hours:

Independent study/self-guided study = 114 hours

Face-to-face learning = 36 hours

Total = 150

Reading list: The reading list for this module can be accessed at [readinglists.uwe.ac.uk](https://uwe.rl.talis.com/modules/ubgmk8-15-2.html) via the following link <https://uwe.rl.talis.com/modules/ubgmk8-15-2.html>

Part 4: Assessment

Assessment strategy: Summative assessment:

Online Examination (24 hours): To test retained knowledge and ability to communicate understanding within controlled conditions.

Report: Based on practical and self-guided study, interpreting a suite of thin section/hand specimen/geochemistry data to understand their igneous/metamorphic history. The practical component will examine students' ability to recognise and interpret igneous and metamorphic rocks. The written component will enable students to demonstrate that they have understood key principles relating to processes involved in the creation and occurrence of igneous and metamorphic rocks. Students will be able to show that they have read widely and can apply their reading to back up interpretation of rock specimens.

Formative work:

Formative work will be set during practical and field sessions for students' self assessment. Students will receive preparation exercises for the summative assessment that may include a mock exam.

Assessment tasks:**Examination (Online) (First Sit)**

Description: Online Exam (24 hours)

Weighting: 50 %

Final assessment: Yes

Group work: No

Learning outcomes tested: MO1, MO2, MO3, MO4

Report (First Sit)

Description: Written report (1000 words), based on practical and self-guided study, interpreting a suite of thin section/hand specimen/geochemistry data to understand their igneous/metamorphic history.

Weighting: 50 %

Final assessment: No

Group work: No

Learning outcomes tested: MO1, MO2, MO3, MO4

Examination (Online) (Resit)

Description: Online Exam (24 hours)

Weighting: 50 %

Final assessment: Yes

Group work: No

Learning outcomes tested: MO1, MO2, MO3, MO4

Report (Resit)

Description: Written report (1000 words), based on practical and self-guided study , interpreting a suite of thin section/hand specimen/geochemistry data to understand their igneous/metamorphic history.

Weighting: 50 %

Final assessment: No

Group work: No

Learning outcomes tested: MO1, MO2, MO3, MO4

Part 5: Contributes towards

This module contributes towards the following programmes of study:

Geology [Sep][SW][Frenchay][4yrs] - Not Running BSc (Hons) 2022-23

Geology [Sep][FT][Frenchay][3yrs] - Not Running BSc (Hons) 2022-23
