

MODULE SPECIFICATION

Part 1: Information								
Module Title	Mathematical Biology							
Module Code	UFMFJH-15-M		Level	Level 7				
For implementation from	2018-19							
UWE Credit Rating	15		ECTS Credit Rating	7.5				
Faculty		ty of Environment & hology	Field	Engineering, Design and Mathematics				
Department	FET Dept of Engin Design & Mathematics							
Contributes towards								
Module type:	Standard							
Pre-requisites		Dynamical Systems 2018-19						
Excluded Combinations		None						
Co- requisites		None						
Module Entry requirements		None						

Part 2: Description

Overview: The overarching theme of the module is to apply techniques from dynamical systems theory to model, analyse, interpret and predict the behaviour of important phenomena in biology. No previous expertise in biology is assumed or required.

Educational Aims: See Learning Outcomes.

Outline Syllabus: The following list of `bio-themes' is intended to be indicative. These themes may change from year to year depending on current trends in research (e.g. evolution of bacterial resistance), topics of current national/international importance (e.g. outbreak of recent epidemics like Ebola or Foot and Mouth) or the specialisms of academic staff.

Population Genetics and Evolution:

Genotype, phenotype, alleles and frequency; Hardy-Weinberg Law; survival, selection, mutation, evolution; Fisher-Haldane-Wright Equation; fitness.

Ecological Population Dynamics:

Growth rate, environmental carrying capacity; competition, predation, cooperation; extinction, coexistence, permanence, diversity; sustainability.

Dynamics of Infectious Diseases:

SI, SIS, SIR, SIRS compartment models; epidemics, endemics; control, eradication, public health.

Teaching and Learning Methods: The module syllabus is delivered by means of lectures, to introduce and develop new material and provide context.

Problems Classes/Workshops will be used to go through solutions to homework exercises or consolidate/contextualise material.

Tutorials will offer mathematical support, guidance and feedback. Students will have the opportunity to ask individual questions about problems they may be having with homework exercises, lecture material, assessment preparation, etc. This may also include some computer lab sessions.

Part 3: Assessment

The assessment will be a single 3 hour examination consisting of a combination of partially seen and unseen questions.

The learning outcome relating to the description and critique of the use of mathematical models in a biological context of current/recent interest or importance will be assessed using the partially seen question(s). Such question(s) will be based on reading/resources identified by the lecturer during teaching delivery and students will have the opportunity to engage with this material well in advance of the examination. As an illustrative example, students might be asked to prepare a short essay on the predictions of particular mathematical model used by a government agency to model a recent epidemic; or provide a critique of several classes of models used in recent years to investigate the evolution of bacterial resistance.

The unseen question(s) will assess the learning outcomes relating to key mathematical (subject specific) skills involved in the analysis and interpretation of mathematical models in a variety of biological contexts (see Outline Syllabus). The assessment method (wholly by examination) will prevent plagiarism and is aligned with the programme's assessment strategy to enable students to manage coursework workloads effectively.

First Sit Components	Final Assessment	Element weighting	Description
Examination - Component A	~	100 %	Examination 3 hours
Resit Components	Final Assessment	Element weighting	Description

	Part 4: Teacl	hing and Learning Methods					
Learning Outcomes	On successful completion of this module students will be able to:						
	Module Learning Outcomes						
	MO1 Describe and interpret the structure of mathematical models used in a variety of biological contexts						
	q	Apply appropriate mathematical techniques to determine the qualitative behaviour of models used in a variety of biological contexts					
	MO3 Interpret the results of mathematical analyses in a variety of biological contexts						
		Critically describe and interpret the strengths and limitations of mathematical models used in a variety of biological contexts					
Contact Hours	Contact Hours						
	Independent Study Hours:						
	Independent study/self-g	114					
		Total Independent Study Hours:	114				
	Scheduled Learning and Teaching Hours:						
	Face-to-face learning	36					
	Total Schedul	36					
	Hours to be allocated	150					
	Allocated Hours	150					
Reading List	The reading list for this module can be accessed via the following link:
