

MODULE SPECIFICATION

Part 1: Information			
Module Title	Individual Civil Engineering Project		
Module Code	UBGMQP-30-3	Level	Level 6
For implementation from	2018-19		
UWE Credit Rating	30	ECTS Credit Rating	15
Faculty	Faculty of Environment & Technology	Field	Geography and Environmental Management
Department	FET Dept of Geography & Environmental Mgmt		
Contributes towards			
Module type:	Standard		
Pre-requisites	None		
Excluded Combinations	None		
Co- requisites	None		
Module Entry requirements	None		

Part 2: Description
<p>Features: Module Entry Requirements: 60 credits at level 2</p> <p>Educational Aims: The Individual Civil Engineering Project is a major, individual investigative research or design study project. The precise nature of the project will depend on the topic selected by the student but in all situations the topic should be intellectually challenging and provide scope for students to demonstrate initiative and creative thinking.</p> <p>Outline Syllabus: See educational aims and teaching and learning methods.</p> <p>Teaching and Learning Methods: Students will select topics provided by supervisors, or may propose a topic to a supervisor. Student proposed topics must be agreed with the student's supervisor. The student's supervisor will be nominated by the module leader based on the supervisors industrial and research experience in the area of the topic. Learning is predominantly independent, self-directed study. Through this, and with the guidance of the supervisor, and the provision of learning resources and timetabled sessions, students will</p>

STUDENT AND ACADEMIC SERVICES

develop skills in:

Planning and management of a technical project
Management of the ethics and risks of a project
Selecting, reviewing, critically analysing and evaluating appropriate academic and grey literature, and also any relevant legislation, codes of practice, and other policy or practice literature.
Developing an appropriate research or design study methodology that meets the project requirements.
Clearly presenting the results in appropriate formats including tables, figures and charts
Thorough analysis of data using appropriate methods

Scheduled learning:

Formal taught sessions are provided for ethical, cost estimation (e.g. for materials purchase if relevant), risk management and academic skills at the beginning of the module.

Supervision:

Each student will have a nominated supervisor. Review meetings will be held on a regular basis between supervisor and student. These meetings will allow the student to discuss the planning and progress of the project, and receive feedback, direction and guidance from the supervisor. These meetings will typically take place every two to three weeks during term time. It is the responsibility of the student to arrange and record these meetings.

Part 3: Assessment

Formative assessment:

On-going formative feedback will be provided through one-to-one contact with supervisors. Feedback will also be given at the progress presentations.

Summative assessment:

Component A:

Element A1: Progress presentation (10 minutes):

The student is required to present for 10 minutes. The presentation must discuss the research aims, objectives, progress to date and potential outcomes. This presentation provides a key point in the development of the project, the feedback from which will allow the student to develop their project report before the submission.

The presentation will be followed by 5 minutes of critical questioning on the contents of the presentation.

Element A2: Oral examination (10 minutes):

A oral examination of the project and project report designed to assess the student's deeper understanding of the work under taken in the key areas of:

Effectively and precisely discuss the technical content of the project.

Critically evaluate the work presented in the project report.

Clearly articulate any limitations of the project.

Provide clear and well justified answers to questions on the project.

Component B:

Element B1: Project report:

The aim of the report is to fully explain the background, aims, methods, results, analysis, and conclusions and recommendations of the work undertaken.

The report will:

Contain a literature review which critically analyses and evaluates the relevant background and identifies a gap in that needs to be filled by the work undertaken.

Include the methodology adopted together with a justification of this methodology.

Clearly state the results and the analysis of the data undertaken.

STUDENT AND ACADEMIC SERVICES

Critically evaluate the results in the light of the previous literature.
Provide conclusions, recommendations and a discussion of limitations.

The report word count is 9 000, excluding appendices and reference list. Any data included in the appendices must be directly relevant to the project.

Appendices to the report must include:
A project proposal developed before the progress presentation.

Marking criteria:
The marking criteria for each element will be published in the brief / module handbook.

Moderation:
The marking team will blind mark a single submission and compare marks prior to marking the remainder of the reports. All reports will be double blind marked.

First Sit Components	Final Assessment	Element weighting	Description
Report - Component B		75 %	Project report (9000 words)
Presentation - Component A		12 %	Progress presentation (10 mins)
Presentation - Component A	✓	13 %	Oral examination (10 mins)
Resit Components	Final Assessment	Element weighting	Description
Report - Component B		75 %	Project report (9000 words)
Presentation - Component A	✓	25 %	Oral examination (10 mins)

Part 4: Teaching and Learning Methods

Learning Outcomes	On successful completion of this module students will be able to:	
		Module Learning Outcomes
	MO1	Carry out research or design study on a technical topic
	MO2	Select, review, critique and synthesise important and relevant knowledge in existing research literature and/or professional practice that are to be examined in a technical project
	MO3	Plan and manage a technical project, including appropriate investigative methodology, to obtain relevant quality information or data from primary and/or secondary sources
	MO4	Present, analyse, interpret and critically evaluate data
	MO5	Make clear and well justified conclusions and recommendations and identify limitations of the work
	MO6	Effectively communicate technical content in written and verbal formats
	MO7	Understand and comply with ethical and risk management matters relevant to the project

STUDENT AND ACADEMIC SERVICES

Contact Hours	Contact Hours	
	Independent Study Hours:	
	Independent study/self-guided study	286
	Total Independent Study Hours:	286
	Scheduled Learning and Teaching Hours:	
	Face-to-face learning	14
	Total Scheduled Learning and Teaching Hours:	14
	Hours to be allocated	300
	Allocated Hours	300
