

MODULE SPECIFICATION

Part 1: Information			
Module Title	Stress Analysis, Materials and Finite Element Analysis		
Module Code	UFMF9Q-30-3	Level	Level 6
For implementation from	2018-19		
UWE Credit Rating	30	ECTS Credit Rating	15
Faculty	Faculty of Environment & Technology	Field	Engineering, Design and Mathematics
Department	FET Dept of Engin Design & Mathematics		
Contributes towards			
Module type:	Standard		
Pre-requisites	None		
Excluded Combinations	None		
Co- requisites	None		
Module Entry requirements	None		

Part 2: Description
<p>Overview: The Stress Analysis, Materials, and Finite Element Analysis module focusses on advanced stress concepts, such as curved beams, deflections and un-symmetric bending and material stress and fatigue. Key areas for study are understanding stress theory and how to apply FEA theory to practical modelling techniques.</p> <p>Educational Aims: Learners will develop the theoretical understanding of advanced stress concepts and material stress, alongside Finite Element Analysis (FEA) to enable the learner to apply stress concepts to carry out modelling, which would be used in industry.</p> <p>Outline Syllabus: The topics covered in this unit are:</p> <p>Stress: Stress Concentration Un-symmetric bending Curved beams Elementary elastic plastic analysis Buckling of struts</p>

STUDENT AND ACADEMIC SERVICES

Beams deflections
 Mohr's Circle for stress and strain
 Rosette analysis
 Failure criteria for ductile and brittle materials

Materials:

Introduction to Design Codes and Standards
 Energy Methods in Structural Analysis
 Impact
 Fatigue Analysis
 Fracture Mechanics
 Introduction to Creep and Plastic Stress Analysis

Finite Element Analysis:

Introduction to FEA theory, technique and applications
 Practical modelling techniques
 Elementary elastic plastic analysis.

Teaching and Learning Methods: See Outline Syllabus and Assessment.

Part 3: Assessment

Component A – Data Interpretation: Analysing a Case Study – The learner will be given a set of stress data as a case study and will be asked to perform stress analysis calculations.

Component B – FEA Model Design – The learners will design an FEA model of stress in a section of nuclear plant and present their results, along with material stress analysis results and material properties evaluation in presentation slides.

The resit assessment tasks for this module will involve a rework and reflective evaluation of the work carried out in the original task.

First Sit Components	Final Assessment	Element weighting	Description
Set Exercise - Component B		45 %	Presentation slides
Practical Skills Assessment - Component B		30 %	FEA model design
Case Study - Component A	✓	25 %	Data interpretation - case study
Resit Components	Final Assessment	Element weighting	Description
Set Exercise - Component B		45 %	Presentation slides
Practical Skills Assessment - Component B		30 %	FEA model design
Case Study - Component A	✓	25 %	Data interpretation - case study
