

MODULE SPECIFICATION

Part 1: Information			
Module Title	Law, Experts and Justice		
Module Code	UJUUKM-30-2	Level	Level 5
For implementation from	2020-21		
UWE Credit Rating	30	ECTS Credit Rating	15
Faculty	Faculty of Business & Law	Field	Law Undergraduate (Programmes)
Department	FBL Dept of Law		
Module type:	Standard		
Pre-requisites	None		
Excluded Combinations	None		
Co- requisites	None		
Module Entry requirements	None		

Part 2: Description
<p>Educational Aims: See Learning Outcomes</p> <p>Outline Syllabus: All aspects of the syllabus will be taught in a manner appropriate and specific to the subject-specialisms within the relevant degree programme. This will be achieved by a teaching style utilising subject-specific scientific and legal practice perspectives to illustrate the core legal and scientific materials and issues.</p> <p>Introduction to law:</p> <p>An introduction to legal language and the common law system, explanation of the way in which cases are cited, the distinction between civil and criminal law, an introduction to the court structure and sources of law. Primary and secondary sources of law are explained and distinguished.</p> <p>The Criminal and Civil Justice Systems: A critical explanation of the concept of justice in the criminal and civil systems. A critical evaluation of the use of computing experts and experts generally in this process and an overview of relevant points of theoretical and evaluative critique of the process of justice in both systems and whether 'justice' can be said to be achieved. Introduction to the issues that have been identified in case law with expert evidence and the involvement of the LC.</p> <p>The Expert in the Criminal and Civil Justice Systems:</p> <p>A detailed, critical examination of the modern criminal and civil justice system, and the significance of their adversarial nature. This includes tracing its development and tracing the use of experts through this</p>

STUDENT AND ACADEMIC SERVICES

development. Equity and common law civil and criminal remedies are explained and analysed in the context of the concept of 'justice'. Plurality of meaning and viewpoints in relation to the nature, meaning and use of experts is introduced. The rise of the computing expert is explained and a parallel is drawn with the rise of data-basing and the surveillance agenda. Privacy and Data Protection theory and law are considered in the context of the jurisprudence concerning forensic computing evidence.

The Expert Giving Evidence in Court:

Includes a critical introduction to the use of expert evidence in the criminal justice system and a comparative analysis of forensic and computing related expert evidence, and its use in the adversarial system. It also includes explanation of the interface between criminal and civil legal process and how the use of expert evidence may be used by either or both. The course leads on to discussion of the factors driving criminal prosecution and civil litigation including public policy issues particularly as they relate to the use of experts and finishes with a critical evaluation of the Law Commission Review and recommendations into the use of expert evidence in the criminal justice system and the recommendations for change. Discussion of public policy in relation to computing related issues and how the UK's justice bodies have used technology and technological experts in relation to successful and unsuccessful prosecutions.

Specific Issues relating to Expert Evidence:

The content of this part of the course may change from year to year to ensure material is topical and relevant to forensic computing students. The issues envisaged are those raised in the LCR, miscarriages of justice involving expert evidence, topical issues as they arise involving complex issues of scientific methodology in the context of expert evidence, expert evidence and moral considerations, the points of difference and similarities between the concerns of the legal, scientific and computing communities in relation to the use of expert evidence in the civil and criminal UK justice systems. Issues of the inter-relation between computing technology and the subject matters of computing evidence (e.g. pornography, sensitive information, child abuse etc.) as it impacts on the legal system, the media, politically and publicly are considered. The use of computing experts at the investigative stages of the justice system and the trial stage is separated and considered separately. Investigating allegations and the rights of the suspect are covered.

The Context, Methodology and Impact of Expert Evidence:

This element enables forensic computing students to place into context the relevance and importance of expert evidence and its particular role in relation to miscarriages of justice and problematic investigations. Areas of potential controversy, particularly where computing experts have commented both in court and to government are explained and critiqued. The impact and process of resolving miscarriages of justice is considered including contextual evaluation and consideration of the social, political, ethical, scientific and legal considerations in relation to problematic types of expert evidence and their presentation in court. Issues of methodology and consequences of expert evidence involving uncertain methodologies are considered from a scientific and legal perspective. The future for computing experts is discussed.

Teaching and Learning Methods: Module delivery will be based on a combination of weekly two hour lectures and fortnightly two hour workshops (semester one) and weekly two hour workshops (semester two), student demand led support sessions, and online support. The ratio of lectures to workshops may alter within the constraints of minimum contact hours to best suit the needs of the students.

Teaching will be delivered by two hour lectures, two hour workshop sessions and individual student support sessions. In the lectures, emphasis is placed on providing the student with the opportunities to question, understand, analyse and evaluate the law and associated issues in their historical, practical, academic and social contexts. In addition there may be multiple choice tests, with answers via Blackboard to support student learning and to provide regular feedback. Clicker tests may also be used during lectures as a means of formative assessment.

It is not necessarily envisaged that every topic in the syllabus will be covered in any one academic year but the selection will give students a necessary and relevant overview of the most pertinent issues in any year which may reflect the changing legal environment in which context the course is delivered.

Lectures and workshops are designed to communicate the principal features of a topic, including its major principles, rules, concepts, relationships and values; to stimulate interest in the topic and provide student discussion of alternative views; and to provide other information necessary to facilitate its further study, including updating materials on a regular basis.

STUDENT AND ACADEMIC SERVICES

In most cases there is no expectation of in-depth preliminary work for lectures, although students may be given directed preliminary reading from recommended texts. From time to time, material may be also given out in advance so as to provide the basis for detailed discussion of topics in workshops.

Attendance at a Crown Court and Magistrates Court forms the independent learning component of this module. Students will be expected to pursue independent and directed study between class contact sessions. Students will be encouraged regularly to attend court and to engage with current legal and forensic related news items.

There is a scheduled taught research skills session which introduces non-law students to the availability of online and paper law resources, including instruction on how to access and work with these resources. Access to a series of online tutorials and tests to informally practice and assess competence in this area is provided.

Part 3: Assessment

This module will be assessed by the following components:

Component A (40% of module mark)

Online exam to be completed within a 24 hour window It will include multiple choice questions and a choice of 2 out of 4 short essay questions (up to 1500 words in total)

Component B (60 % of module mark)

Component B1: A research project investigating an aspect of the use of experts in court (50% of module mark)

Component B2: A report of courtroom scenarios based on live or recorded versions of court proceedings (10% of module mark)

First Sit Components	Final Assessment	Element weighting	Description
Report - Component B		10 %	Report of courtroom scenarios (maximum 1,000 words excl. footnotes)
Project - Component B	✓	50 %	Research project (maximum 3,000 words excl. footnotes)
Examination (Online) - Component A		40 %	Online examination - (MCQs and up to 1500 words)
Resit Components	Final Assessment	Element weighting	Description
Project - Component B	✓	50 %	Research project (maximum 3,000 words excl. footnotes)
Examination - Component A		40 %	Online examination (MCQs and up to 1500 words)
Report - Component B		10 %	Report of courtroom scenarios (maximum 1,000 words excl. footnotes)

Part 4: Teaching and Learning Methods

Learning Outcomes	On successful completion of this module students will achieve the following learning outcomes:	
	Module Learning Outcomes	Reference
	Understand the UK's civil and criminal justice systems including what constitutes legal authority, to undertake basic legal analysis of those authorities; and to be able to distinguish between the different processes and requirements of civil and criminal litigation procedures	MO1

STUDENT AND ACADEMIC SERVICES

	Understand the roles undertaken by forensic computing experts, other experts and the relevance of computing issues to the justice system, with critical evaluation of the key arguments and issues in relation to the role of the expert witness at each stage of civil and criminal litigation processes, using discipline-specific examples	MO2
	Understand issues of scientific methodology relevant to expert evidence, identifying when these methods of analysis are appropriate and to understand the legal, scientific and contextual aspects of the use of expert evidence in court including issues of methodology and the impact of these issues on the justice systems	MO3
	Critically evaluate the role of the expert in these contexts via evaluation of the legal and scientific framework controlling the use of expert evidence and the process that occurs in identifying and addressing a miscarriage of justice and/or a successful appeal and to critically evaluate whether the justice system deals effectively with such situations	MO4
	Critically evaluate and synthesise legal and scientific material in a manner that explains the points of similarity and difference in relation to how these types of material are understood by the legal and scientific communities respectively	MO5
Contact Hours	Independent Study Hours:	
	Independent study/self-guided study	228
	Total Independent Study Hours:	228
	Scheduled Learning and Teaching Hours:	
	Face-to-face learning	72
	Total Scheduled Learning and Teaching Hours:	72
	Hours to be allocated	300
	Allocated Hours	300
Reading List	<p>The reading list for this module can be accessed via the following link:</p> <p>https://uwe.rl.talis.com/modules/ujuukm-30-2.html</p>	

Part 5: Contributes Towards

This module contributes towards the following programmes of study:

Forensic Computing and Security {Foundation} [Sep][SW][Frenchay][5yrs] BSc (Hons) 2018-19

Forensic Computing and Security {Foundation} [Sep][FT][Frenchay][4yrs] BSc (Hons) 2018-19

Computer Security and Forensics {Foundation} [Sep] [FT] [GCET] [4yrs] BSc (Hons) 2018-19

Computer Security and Forensics [Feb][FT][GCET][4yrs] BSc (Hons) 2018-19

Computer Security and Forensics [Oct][FT][GCET][4yrs] BSc (Hons) 2018-19
