

ACADEMIC SERVICES

MODULE SPECIFICATION

Part 1: Basic Data							
Module Title	Advanced Transfusion and Transplantation Science						
Module Code	USSKL4-30-3		Level	3 Version 1		1	
UWE Credit Rating	30	ECTS Credit Rating	15	WBL module? No			
Owning Faculty	Health and Applied Sciences		Field	Biological, Biomedical and Analytical Sciences			and
Department	Biological, Biomedical and Analytical Sciences		Module Type	Standard			
Contributes towards	BSc (Hons) Healthcare Science (Life Sciences)						
Pre-requisites	USSJTA-60-2 Healthcare Science in Practice		Co- requisites	USSKL5-30-3 Applied Transfusion and Transplantation Science			e
Excluded Combinations	None		Module Entry requirements	None			
First CAP Approval Date	2 June 2015		Valid from	September 2016			
Revision CAP Approval Date			Revised with effect from				

Review Date	

Part 2: Learning and Teaching			
Learning Outcomes	On successful completion of this module students will be able to (assessment intended for each learning outcome designated by [*] corresponding to assessment section): • Critically evaluate the application of tissue science methods and techniques and illustrate their value in relevant areas of clinical practice [A1, A2, B1] • Critically evaluate the application of methods and techniques used in histocompatibility and immunogenetics and illustrate their value in relevant areas of clinical practice [A2, B1] • Critically evaluate the application of stem cell science methods and techniques and illustrate their value in relevant areas of clinical practice [A2, B1]		
Syllabus Outline	Core transfusion medicine Blood group systems - genes, antigens and antibodies Manual and automated techniques and technologies for ABO/D typing, serological crossmatching, red cell phenotyping, antibody screening and identification Overview of blood transfusion services, range of blood components/products manufactured and their applications Principles of pre-transfusion testing		

- Normal ranges and predictive values for pathology tests used to inform transfusion support
- Aetiology and clinical features of conditions requiring transfusion support
- Overview of legislation/guidelines relevant to blood transfusion practice

Specialised haematology

- Preparation and interpretation of blood films, including blood parasites.
- Mechanisms and tests of haemostasis
- Monitoring programmes for anticoagulation therapy
- Haematinic testing and clinical applications
- Causes of haematological malignancy
- Tests for the diagnosis and management of haematological malignancy in the adult
- Minimal residual disease
- Antenatal screening tests for haemolytic disease of the foetus and newborn
- Tests of feto-maternal haemorrhage

Specialised immunology, tissue and transplantation

- Immunogenetics and the major histocompatibility complex
- Transplantation immunology and histocompatibility testing
- Tests of transplant viability and rejection
- Tests of immunosuppressive therapy
- Stem cells
- Tissue banking
- The multidisciplinary team approach to the management of tissue and organ transplantation

Contact Hours

There will be 2 weeks of contact time at UWE in 2 x 1 week blocks. Included in each block week are laboratory workshops, lectures and tutorials. The contact time will equate to approximately 12 hours per block (a total of 24 hours).

In addition to the allocated hours on campus learning, students will engage in synchronous and asynchronous online learning. This will comprise a total of approximately 48 hours of online engagement through a combination of lectures, synchronous online tutorials, synchronous and asynchronous discussions, online quizzes, and collaborative group work.

Teaching and Learning Methods

Students are expected to spend 72 hours on scheduled learning and 228 hours on independent learning. Theoretical material within the module will be presented to the students in the form of regular lectures throughout each of the semesters in the academic year. During those times of work based learning, these lectures will be delivered online and involve a number of technological enhancements. The learning of lecture content will be reinforced through time spent in independent learning by the directed reading of recommended texts and through the use of technology enhanced learning resources that will be provided online. This online learning and engagement will be delivered through several avenues:

- Synchronous online tutorials in protected learning time where the student will
 contribute/attend an online activity appropriate to the content at the time at
 which the academic will be present online to facilitate and lead this
 scheduled/timetabled session. This tutorial will be themed/planned.
- Asynchronous discussions in the student's own time (or during protected time
 where permitted and appropriate) where they will engage/collaborate with
 other students on the course or in specified groups, and in which the
 academic is permitted to moderate where necessary, but is not expected to
 contribute.
- Synchronous surgery sessions timetabled for a specific time in which the academic will be available online to answer live questions via discussion boards/blogs/collaborate or to respond to questions posted/asked prior to the session
- Interactive, online formative quizzes made available either following a

- particular package of knowledge exchange/learning, or in specified sessions/time periods.
- Lectures delivered online through a combination of one or more of the following: visual/audio/interactivity/personal formative assessment

Practical classes will include simulated case-study based investigations which will allow students to develop their analytical, interpretive and data handling skills.

The remainder of the independent learning time allocated to the module should be spent preparing written assessments for submission [B1], and undertaking revision for the controlled component [A1].

Scheduled learning includes lectures, seminars, tutorials, project supervision, demonstration, practical classes and workshops; fieldwork; external visits; work based learning; supervised time in studio/workshop.

Independent learning includes hours engaged with essential reading, case study preparation, assignment preparation and completion etc. These sessions constitute an average time per level as indicated in the table below. Scheduled sessions may vary slightly depending on the module choices you make.

Key Information Sets Information

Key Information Sets (KIS) are produced at programme level for all programmes that this module contributes to, which is a requirement set by HESA/HEFCE. KIS are comparable sets of standardised information about undergraduate courses allowing prospective students to compare and contrast between programmes they are interested in applying for.

Key Information Set - Module data					
Number of credits for this module			30		
Hours to be allocated	Scheduled learning and teaching study hours	Independent study hours	Placement study hours	Allocated Hours	
300	72	228	0	300	~
300	/2	228	0	300	0

The table below indicates as a percentage the total assessment of the module which constitutes a -

Written Exam: Unseen written exam, open book written exam, In-class test **Coursework**: Written assignment or essay, report, dissertation, portfolio, project **Practical Exam**: Oral Assessment and/or presentation, practical skills assessment, practical exam

Please note that this is the total of various types of assessment and will not necessarily reflect the component and module weightings in the Assessment section of this module description:

Total assessment of the mo	dule:
Written exam assessment p	ercentage 60%
Coursework assessment pe	rcentage 40%
Practical exam assessment	percentage 0%
	1009/

Reading Strategy

All students will be encouraged to make full use of the print and electronic resources available to them through membership of the University. These include a range of electronic journals and a wide variety of resources available through web sites and

information gateways. The University Library's web pages provide access to subject relevant resources and services, and to the library catalogue. Many resources can be accessed remotely. Students will be presented with opportunities within the curriculum to develop their information retrieval and evaluation skills in order to identify such resources effectively.

Any **essential reading** will be indicated clearly, along with the method for accessing it, e.g. students may be expected to purchase a set text, be given or sold a print study pack or be referred to texts that are available electronically, etc. This guidance will be available either in the module handbook, via the module information on Blackboard or through any other vehicle deemed appropriate by the module/programme leaders.

If **further reading** is expected, this will be indicated clearly. If specific texts are listed, a clear indication will be given regarding how to access them and, if appropriate, students will be given guidance on how to identify relevant sources for themselves, e.g. through use of bibliographical databases.

A detailed reading list will be made available through relevant channels, e.g. module handbooks, Blackboard, etc.

Indicative Reading List

Overfield, J., Dawson, M. and Hamer, D. (2008) *Transfusion Science*. 2nd ed. Bloxham: Scion Publishing Ltd.

Knight, R. (2012) *Transfusion and Transplantation Science (Fundamentals of Biomedical Science)*. Oxford: Oxford University Press.

Contreras, M. (2009) *ABC of Transfusion.* 4th ed. Oxford: Blackwell Publishing. [Also available through UWE library as an e-book]

Clatworthy, M., Watson, C., Allison, M. and Dark, J. (2012) *Transplantation at a glance*. Oxford: Wiley-Blackwell. [Also available through UWE library as an e-book]

Hoffbrand, A. and Moss, P.A.H. (2011) *Essential Haematology.* 6th ed. Oxford: Wiley. [Also available through UWE library as an e-book]

Palllister C.J. and Watson M. (2010) *Haematology*. 2nd ed. Oxford: Scion Publishing Ltd. [Also available through UWE library as an e-book]

Part 3: Assessment

Assessment Strategy

The Assessment Strategy has been designed to support and enhance the development of both subject-based and more general skills, whilst ensuring that the modules learning outcomes are attained, as described below.

Component A

The written exam will provide students with an opportunity to demonstrate both their knowledge on a broad range of topics through a series of short essay questions. Continuous assessment will be provided by the use of 3 x 30 minute online activities embedded in the module. These activities will require UWE login. The module leader will have full access to up-to-date data to monitor progress and marks obtained by students. Feedback at this level will also be provided online and will be by review of the tests after they have been completed and will include the correct answers (after the relevant assessment period has concluded).

The design of these online assessed activities will be varied, for example:

- Timed essay questions
- Label the structure
- Prioritisation structure
- Scenario based questions

Component B

Component B will provide an opportunity for students to demonstrate their ability to apply the principles of Advanced Transfusion and Transplantation Sciences to an unseen problem and/or case study and evidence their skills in approaching and interpreting it appropriately.

Formative feedback is available to students throughout the module through group discussions, and in workshops. Students are provided with formative feed-forward for their exam through a revision and exam preparation session prior to the exam and through the extensive support materials supplied through Blackboard.

All work is marked in line with the Department's Generic Assessment Criteria and conforms to university policies for the setting, collection, marking and return of student work. Where an individual piece of work has specific assessment criteria, this is supplied to the students when the work is set.

This assessment strategy has been designed following best practice on effective assessment from JISC

(http://www.jisc.ac.uk/whatwedo/programmes/elearning/assessment/digiassess.aspx) and The Open University's Centre for Excellence in Teaching and Learning (http://www.open.ac.uk/opencetl/centre-open-learning-mathematics-science-computing-and-technology/activities-projects/e-assessment-learning-the-interactive-comp).

Technical design and deployment of the activities will also follow best practice developed at UWE by the Education Innovation Centre in collaboration with academic colleagues across the university. Staff guidance and support are already in place (http://info.uwe.ac.uk/online/Blackboard/staff/guides/summative-assessments.asp).

Elemen		ent 2			
% weighting between components A and B (Standard modules only)			B:		
			40		
First Sit					
Component A (controlled conditions) Description of each element			Element weighting (as % of component)		
1. Examination (1.5 hours)		50	50%		
2. 3 x 30 minute online activities embedded in the learning process			50%		
Component B Description of each element			Element weighting (as % of component)		
Case study integrated assignment (2000 words)		10	100%		

Resit (further attendance at taught classes is not required)				
Component A (controlled conditions) Description of each element	Element weighting (as % of component)			
Description of each element	(as 70 or component)			
1. Examination (3 hours)	100%			
Component B Description of each element	Element weighting (as % of component)			
Case study integrated assignment (2000 words)	100%			

If a student is permitted a retake of the module under the University Regulations and Procedures, the assessment will be that indicated by the Module Description at the time that retake commences.
