

### MODULE SPECIFICATION

Part 1: Information							
Module Title	Engineering Practice 1b						
Module Code	UFMFXT-15-1		Level	Level 4			
For implementation from	2020-21						
UWE Credit Rating	15		ECTS Credit Rating	7.5			
Faculty	Faculty of Environment & Technology		Field	Engineering, Design and Mathematics			
Department	FET [	Dept of Engin Design & Mathematics					
Module type:	Stand	Standard					
Pre-requisites		None					
Excluded Combinations		None					
Co- requisites		None					
Module Entry requirements		None					

#### Part 2: Description

**Overview**: This module provides a broad comprehension of the competencies and social responsibilities required in order to be a professional engineer in the workplace. The module will develop the engineering habits of mind of: Problem-finding, Creative problem-solving, Visualising, Systems Thinking, Improving, and Adapting.

Holistic design thinking is important for systems engineering, and so particular focus will be placed on the role of a creative skilled practitioner to develop sustainable solutions to problems in today's world, with reference to the Sustainable Development Goals. As well as module learning materials, students will be expected to demonstrate this through module projects involving locally relevant problems, and with a consideration for sustainability issues and civic responsibility.

Engineers typically spend most of their careers working in project teams. Managing projects is a critical skill for career development. To be effective they need to understand the tools and techniques available to them and the issues associated with meeting business and personnel needs. Project management training includes time and budget planning, communication between peers and with clients, teamwork skills, and leadership opportunities.

Communication skills are therefore essential both within a professional work context, and also to engage with communities and groups that are impacted by engineering and mathematics projects and developments. Students will learn about and experience a variety of communication methods

### STUDENT AND ACADEMIC SERVICES

such as technical reports, laboratory reports, oral presentations, posters, and digital media. They will also experience public engagement strategies utilised by professional organisations, as well as the variety of audiences with which these skills can be practiced and explored.

Successful completion of this module will establish students ready for future learning in their degrees, ahead of being student professionals in their chosen careers. This enables students to work towards achieving the UWE graduate attributes of being Self-Reliant and Connected, Ready and Able, Enterprising, Globally Responsible and Future-Facing.

**Educational Aims:** The aim of the module is to promote the development of student engineers on their journey to becoming graduate engineers. The module therefore plays an important role in satisfying the professional awareness and development requirements of engineering awards.

**Outline Syllabus:** This module provides a broad comprehension of the competencies and social responsibilities required in order to be a professional engineer in the workplace.

The module will develop the engineering habits of mind of: Problem-finding, Creative problem-solving, Visualising, Systems Thinking, Improving, Adapting.

**Teaching and Learning Methods:** This module will combine lectures, class-based interactive workshops and experience with the local community. The module includes time spent in simulated workplace environments (such as laboratories or workshops) in order to demonstrate technical and safe conduct in the workplace as well as professional conduct with peers.

#### Part 3: Assessment

The assessments will enable students to demonstrate their understanding of the engineering habits of mind, while reflecting on becoming socially responsible engineers in appropriate professional formats.

Formative feedback takes place during the module and considers the development of the student's engineering habits of mind and reflective thinking. An individual log book is maintained over the whole module as a 'container' for academic outputs at regular intervals, as evidence of professional work in progress, and to track and reflect on professional and personal development.

Formative feedback will consist of:

Discussion between peers within class workshops Discussing between peers within the project groups Project week feedback from professionals within the community context

Component A: Group presentation (poster with peer review)

Component B: Consists of a portfolio consisting of Library skills Reflective report on their learning and professional development, including their specific contribution to the group activity

**Resit Strategy** 

Component A: Requires the student to give an individual poster based on a tutor-specified scenario, alongside a reflection on roles and responsibilities within a group work environment. Component B: has the same profile as the first sit assessment.

## STUDENT AND ACADEMIC SERVICES

Γ

First Sit Components	Final Assessment	Element weighting	Description
Poster - Component A	$\checkmark$	50 %	Group poster and presentation (15 mins)
Portfolio - Component B		50 %	Portfolio Workbook (1500 words)
Resit Components	Final Assessment	Element weighting	Description
Poster - Component A	$\checkmark$	50 %	Individual poster presentation (10 mins)
Portfolio - Component B		50 %	Individual portfolio workbook (1500 words)

Part 4: Teaching and Learning Methods								
Learning Outcomes	On successful completion of this module students will achieve the follo	wing learning o	outcomes:					
	Module Learning Outcomes							
	<ul> <li>Reflect on the roles and responsibilities within a team delivering a project outcome. (EL3, D8m, P11, G1, G4)</li> <li>Communicate accurately and reliably in a variety of forms, demonstrating coherent argument (D1, D2, D6)</li> </ul>							
	Reflect on personal strengths, developmental needs, and competend academic and professional context and engage in appropriate develo activities (P1, P6).		MO3					
	Identify environmental issues and sustainability considerations in engineerin environments (D2, P3, P6, G4).							
Contact Hours	Independent Study Hours:							
	Independent study/self-guided study	11	114					
	Total Independent Study Hours:	4						
	Scheduled Learning and Teaching Hours:							
	Face-to-face learning	36						
	Total Scheduled Learning and Teaching Hours:	5						
	Hours to be allocated     150							
	Allocated Hours	150
